I just got done installing renegade I have not played it for about 5 months. I installed CP2 and it was successful, I have been trying to make a new account but whenever I click Manage Account to make a new one it just keeps saying "Page failed to load or is invalid". Now whenever I click on Advanced Game Listings it just tells me there is a new version of Renegade and if I would like to download it or not and then I click yes and it tries to search for the file then says "Download file not found". I have no idea what I need to do to fix this but if anyone can help that would be great. Thank You.

Read the stickies about installing Renegade and registering a nickname in this subforum :
http://www.renegadeforums.com/index.php?t=thread&frm_id=7&rid=4882

It seems like you forgot to install patch 1.037 which needs to be insalled before core patch 2.

I did everything that forum said and now I am able to get to the screen where it lists all the servers but for some reason no servers show up. Also each time I log into my account when I click advanced game listings it says my password is invalid, then after it says that it takes me to where the list of servers are supposed to show up but they do not. Renguard recognizes my log in name if that helps any. Thank You.

It means that your login name is already used by someone else, or that you forgot your password.

You could try resetting your password if you're sure the nick is registered by you, check here for more info on resetting a password.

You could also try with a new nick, check the same topic for info on creating that.
