I recently got Brenbot 1.52 and now, when I open brenbot, it'll ang at "Starting half-renguard mode" for about a minute, then close. Anybody have any ideas? It's not connecting to IRC or anything.

Run it from the command prompt so you can see the emssage it gives when closing.

Make sure to use 'cd' to jump to the folder with brenbot.exe in first before running it in cmd prompt, or the working directory will be set wrong.
