I've seen it done before, so I was wondering how I can have my server use BRenBot without any
renguard period. So it won't tell my members they can't do anything if they don't have renguard?

Change the settings in commands.xml to not require RenGuard? Pretty simple tbh..

make a plugin to stop if from connecting to renguad network and do what danpaul says <renguard
required="1"/> to <renguard required="0"/> , renguard waste of resources   don't flame me for
saying that

Edit:
I guess you cant make a plugin since you don't kno the renguard protocol or anything , brenbot
should just remove it the renguard protocols and complety remove it and release the source)-o.

That plugin wont work in 1.52, it calls a method which no longer exists.

You should disable it properly using the configuration options provided with the bot... you can turn off ALL RenGuard related functionality that way without needing any plugins or addins or whatever.

Just wait for 1.54 (if that's the next public version?)

It already drops RenGuard support.

But for now, do what Gen_Blacky said.

In renguard.cfg, set the messages to some thing like:

Quote:[BR] RenGuard is gay - Don't download it!
(Message is for lulz factor.)

and set in commands.xml

Quote:<renguard required="1" />

TO:

Quote:<renguard required="0" />

Do this for all plugins' .xml files.
