Ok first off I would like to say: Hi I'm new.

Now then: I put my name and password into the slots and then clicked the "save info" box, using the same name and password. Now when I login it says "Invalid password" and won't show any servers. Is there anyway I can uncheck the box? Or is there a way to get around this? Thanks.

If you chose to always log in with that information, you'll need to get to the screen right after you click Multiplay Internet. Click 'My Information' from the pop-up menu on the left of the screen. Choose the account at the top, then click Delete Account (don't worry, it only removes the account from the list on your computer). Then try logging in again with the correct password.

If you chose not to always login with that information, when you get the login popup, just choose the account, then Delete Account, and try to login with the correct password like above.
