Hi Renegade-Guys,  
at first sorry for my bad english

I want to install my first renegade server.  
I have installed the RedHat 8 Edition and XWISP 1.0 Beta (xwisp-pol2.pl) now it works on WOL (should be) but I also want SSAOW for example or the CP2 or bRenBot...  
But after anything else (./xwisp-pol2.pl) doesn't work looks like that every mod use another scripts.so but I'm not sure.  
I'm very new with that hole lfds thing but I think to know that i need XWISP for listing the Server in WOL but I want SSAOW vor the big crates for example.

So can someone give me a link or a little instruction ?  
Would be really nice.

Why not use SSGM? There is a Linux version of it somewhere.

Yea those links have been dead for some time(Which is why I said "somewhere"), there are other places to download the windows version but not the linux version

Maybe some nice person will upload the linux version.

The Link already works but SSGM doesn't support WOL, xwisp do, is that right ?

SSGM Supports both GSA and WOL.

Yea I haven't played around with the linux version so I'm not 100% sure there, though if it doesn't work I guess it doesn't work.
