Is there a way to take a model (in gmax) and make it bigger to the appropriate size for the game without destroying its quality? I got a nice model but it was impossibly small so I scaled it to bigger size, but the model quality dropped like a rock... in fact, some parts just disappeared and there were holes everywhere.

I realize this model is already crappy but I tried scaling another perfectly good model and got similar results.

Also to those who are thinking "WTF IS THAT" this is just a test before I go to something bigger. Good thing too...

Well i had this problem before. Try unselecting the Option "Smooth Across Normal Meshes" before export it should work, it did for me.

No, wait... it looks crappy even before I scaled it.

OK, I'll be up front. I'm using a program called LeoCad which is like Gmax but with Lego blocks (yes. virtual lego blocks). It can export models to 3ds format which I imported into gmax. Is importing the problem? Should I just use 3ds max? I wouldn't know where to get it though...

Oops you are using Gmax... well i would suggest using Gmax/renx Only....

EDIT** there's probably something amiss when exporting from your said program...and there is ways of getting Max for free but i will leave that to you since this forum does not accept link to such material..

3DS MAX FTW

But isn't Renx needed to rig up a turret? I'd still have to export and probably screw it up again.

I'll probably have to pass on 3ds for now anyway.

I'll figure something out.

Max/Renx/Gmax, are all used to model/bone, and texture objects for Renegade...doesn't really matter which one you choose. All can do the the same thing with the Renegade Gamepack

Yeah, it must be LeoCad. I'm tempted to upload one in 3ds and letting someone look at it, see if it's screwed up, but I don't think it's worth it. I'm now attempting to use basic skills in gmax to make my own turrets. Wish me luck

Those seem like backfaces, so try ticking the W3D export option '2Side' for all of your meshes before exporting them.

Actually, it probably is the other program because, like I said, it already looks this bad when i import it into gmax. I do not believe exporting is the problem.

Thanks, but I decided not to pursue the thing.

Still, Lego buildings would be cool
