Had to reinstall Renegade yesterday coz Tiberian Sun changed the Westwood Chat version and corrupted the always.dat in the Renegade folder!! Anyway as Renegade was installing I noticed that the Multiplayer maps were installed along with the default C&C_Under. I have found out that the Under map has an extra file attached to it named Skirmish00.dat, now I checked this Skirmish00.dat and all it is, is a notepad executable file with 3 lines in it...Default = 0C&C Under = 0Default_C&C Under = YCan someone try and make a second skirmish00.dat and try and get a different multiplayer map to work in Multiplayer Practice. If it works can u get back to me right away (Remember to back up :rolleyes)
