I got new computers and reinstalled ren, tried to play, first said wol wasn't compatible, so I reinstalled wol online, then went in, clicked multiplayer, and it said Requesting Server List, then times out every time... not sure if I need any scripts or updates or anything.. not sure why it does it.. played fine before.. Any updates that are helpful, or needed would be great as well

Tried that, tried reinstalling, and restarting ren, as well. always says requesting server list, then operation timed out, every time

2 questions,

1. Did you install Renegade following this guide:

<http://www.renegadeforums.com/index.php?t=msg&th=24533&start=0&rid=2> 1525(minus Renguard it's useless)

2. Do you have a Router or some sort of Firewall which could be blocking Renegade from accessing the internet?

PS. This should have been posted in the "Renegade Client" Subforum".

Didn't follow that guide.. I installed with the new decade, and I do have a router/firewall, but I tried turning fire wall off, and it still didn't work

That kind of problem imo would only come from a firewall, try this: if you do have a router disconnect it from the modem and plug the modem directly into your computer.

I had none of the original maps.. I looked.. and went to that help page which let me extract some, but some had errors.. Is there a place where I can get a bunch of the maps in one?

It seems to me your install went a bit wrong, if u don't have any of the original maps... Try reinstalling Renegade to start with.

Also, check if you have a software firewall. A router shouldn't block it, a software firewall could. Ask your dad if you're not sure.
