Using the 3D surround codec I get 5.1 with my X-FI setup.. Well I hear people behind me from the back speakers and whatnot.. It might be emulated?

Costs that much for that?

If everyone here just donated 1 or 10 dollers, we would have that.

Miles is expensive for a reason, alot of big games use it (for example CoD 5).

I'm pretty sure most Ren Players won't want this anyway, simply because many of us still stick with good ol' stereo.

I'd like it even though I don't have surround sound

I'm hoping to actually get surround sound soon-ish for my computer

I didn't even think Renegade pulled off 5.1 sound right, unless Miles is the only one that actually works right (I always use one of the other four because 2D positional audio never sounded all that great to me).
