I recently tried to change the font of renegade. I was successful, but then decided to keep it the way it was. I deleted   my custom stylmgr.ini but found the menu and text box chat(when i'm typing it not in the public/team chat) to look kind of funny.

The background is black because I saved the back.dds 1024 x 1024 (tried using the loadscreen_1 thru 4 and didn't resize). I uninstalled my photoshop and wasted about 3 hours finding and installing CS4 to find it wouldn't work. I feel like a dumb ass
