OK when i start a Batch (.BAT) file then the Window always close Automacally that i cant even read the Message, thats why i cant start my GTA San Andreas Server and some other things is there a way to fix that? i cant add "pause" because its a .exe file that starts a .BAT file, i searched in Google but didnt found anything to stop that so anyone here know how to fix it ?

That, or open in notepad.

cmd is better though.

i want to open a .exe (San Andreas Server) but the window always close because its running as a .BAT

EDIT

OK everything fixed, i used "CMD" window to open the Normall Window, then i typed in "start" and draged the .exe into the CMD window and everything worked then, Thanks guys
