[View Forum Message](#) <> [Reply to Message](#)

Hi everyone,

Maybe you remember the serverside HUD project of campa and me. It wasn't never really finished and it can't be released only for our RenCom Server (not of technical reasons). I decided to finish it for you all and made nearly finished version but you some points to know:

1. It uses a modified version of the shaders.dll. It contains a handfull of bugfixes and new features (and maybe some new bugs^). I remember all of them some important ones are mentioned below.
2. I doesn't include the Building-Bars but every other change we made.
3. I didn't included any mapoverviews - I'm going to release them seperatly. Maybe you use canadacdn's ones from renhelp.
4. This HUD supports every screen resolution but maybe if you use a too small resolution some boxes will overleap.
This screen-resolution independence was not made by us! It can already be made with a pure 3.4.4. shader.dll
5. A last information to the skilled programmers here: I made the last changes on the shaderhud.cpp code and I'm a programming beginner. I just copied existing code and modified it for my purposes. Maybe you will notice that in some way when you use it or when I give the source to some of you.

*Major Changes/Features:

- HUD shows active mines of your Team
- BulletBar shows the current number of Bullets in your weapon
- fixed some issues with the radar and the mapoverviews
- every number depends now on these fontXxX.tga's except the Weaponsdescription
- Added BulletIcon (like the HealthIcon)

I attached the hud to this post and you can download it at my site at the others-category (if you can't see the entry press F5 reload).
<http://deathlink.ut-ccr.de/>

Have fun with it.

Edit3: So here is the release compiled version including the source.
Merry Christmas!

[View Forum Message](#) <> [Reply to Message](#)

Wow! This looks really good! I especially like the 'basic' look of the HUD, not too much eye candy, but a basic, good looking HUD. Will sure try this HUD out

PS: I'm using a couple replacements/mod(s) from your site, like the 'leet sniper rifle' and the 'blood mod', really cool stuff! The only thing is that most of your weapon replacements are missing first person stealth views (First person view for weapons, while being in 'stealth mode') + strange reloading, but next to that, they are awesome work!

[View Forum Message](#) <> [Reply to Message](#)

Hmm, It seems my computer hates the new shaders.dll, because with the modified shaders.dll, my Renegade crashes instantly after starting Renegade up, but with the basic shaders.dll from Scripts 3.4.4, it doesn't crash.

With the basic shaders.dll, it kinda fucks up the HUD :s

Edit: Seems Raven has the same problem as me

Short fix (worked for me):

While using the normal shaders.dll, turn 'Shaders enabled' off in the 'BHS.dll options', close the game, replace the modified shaders.dll back in your data map, and see if it works

Lol, works for me too. Guess I'll just do that. On a side note though, there are several memory leaks in the changes you made.

What does this mean in detail? Sry for question but I really don't know.

The license means you must release any source code for any changes you release to the public to any dll under scripts.dll that does not have a specific exception to it in the license text.

Releasing a binary without source code is breaking the license.

Also, if you haven't noticed, I'm a member of the TT team

This isn't his fault. I compiled an unaltered shaders.dll and it crashed in the same manner. The only way is to use the original shaders.dll provided, disable Shaders in BHS options, and run the altered shaders.dll.

At last one picture of our internal full HUD with BuildingBars.

Everybody who knows at least a bit programming is able to create them with the help of the existing code. I did my try as a programming nub with the bulletbar and you see it works.

Don't worry it won't be released.

It wouldn't affect public-lame-40/50-players-marathon-play but the here are still some ppl who play clanwars.

Caveman wrote on Wed, 24 December 2008 10:22l get this after playing game.. Just want to know what it is

It's the results of somebody releasing a Debug build DLL instead of a Release build one.

Shouldn't crash your game, but you will get worse FPS than with a release build.

I used to get that. It isn't really that much FPS, it just says that. I would get 300FPS at some points and it wouldn't seem any different than 40.

Just look in the current scripts source, then you can do it by yourself

Or considering he released something with an agreement on it forcing him to release the source.

Also it would be much appreciated deathlink if this wasn't the debugger dll and a release compile :\

Hey I have a talk with someone who knows how to turn this stuff off XD and this someone already has my source. I'm going to compile the shaders.dll without the debug stuff and maybe some other bugs this someone found. Then I think it is a good point for this small lil archive with the .cpp's right?

Edit: Merry Christmas!

Edit2: Okay I found everything with the debug and release stuff.

Anant, that picture you posted shows a desktop with a 1024x768 resolution. I can tell due to the space the taskbar has. Surely you can choose that. If not, there's something up. I don't think a 17" or 19" LCD would have a native/maximum resolution of 800x600. R315r4z0r wrote on Wed, 24 December 2008 13:56 I used to get that. It isn't really that much FPS, it just says that. I would get 300FPS at some points and it wouldn't seem any different than 40. I don't know about you, but when it says I get so many FPS, I'm getting that many FPS. If I disable v-sync, depending on what's going on and how many players are in the server, I can sometimes average about 200FPS (keep in mind that this is at 1600x1200 with 8xAA, 16xAF, and Supersampling AA enabled), and when I do, I can most definitely tell the difference between it (even though it's just 100FPS with screen tearing) versus a comparatively slow 40FPS. Then again, I can see the difference between 60FPS and 100FPS to the point to where, if I've played a game with a constant 100FPS (Renegade hardly ever goes below that for me if I enable v-sync), then 60FPS is just slow to me, so maybe it's just me, and you can't tell that you're getting what it says when it's over a certain amount. If you're used to 40-60FPS, and you have an LCD that won't go higher than, say, 60hz or 75hz, it may really be doing that many FPS, but it may not feel any higher to you since you're used to that range and anything higher doesn't come off to you.

Edit: By the way, I'll second the comment that, of all of the HUDs I've seen, this is the first I've downloaded and liked. Nice job!

For the people who want overlay maps, I copied all the overlay maps from Canadacdn's HUD into this RAR file. They work with this HUD, so you just extract them into your DATA folder, and they work.

SEE THE ATTACHMENTS!! 3 parts, because the max file size is 1024kb -.-

I did not create those overlay maps, so the credits go to Canadacdn and his HUD:

<http://ren.game-maps.net/index.php?action=file&id=966>

If i get my DDS plugin for Photoshop CS4 Extended problem fixed:

<http://www.renegadeforums.com/index.php?t=msg&th=31359&start=0&rid=2> 2151

I might be able to create more overlay maps, starting with Glacier and Islands

@ DeathLink 6.0,

I sure would want to create my 'own' HUD out of this HUD, but I got no experience with coding at all. If i want to start coding (and for Renegade), what would be the best place to start? I presume Renhelp?

You can use our edited shaders.dll, all settings are in the 'hud.ini'.

All important notes about the settings can you find in the 'bhs.txt'.

I'm making my own based HUD out of the HUD atm, thanks for the advice cAmpa. I never ever looked at HUD.ini, but when I opened it, It was really easy for me to understand everything (without opening bhs.txt). I know HUD.ini isn't really coding (for me now), but just replacing/moving parts of the existing HUD, but its cool and easy

I'm wondering though, the entire HUD works on a grid with X and Y coordinates, but whats the exact size of this grid? I was searching for the X middle, but couldn't really find it (-690 till -710?). So what would be the lowest and highest X and Y for this Grid?

That's not what I meant. I mean, when it says I am getting 5 FPS, my game is really running at 5

FPS as in really choppy. 20 is playable but still a little jumpy. 30-40 FPS is very smooth and 60 is flawless. Anything above 60, be it 61 or 300, seems exactly the same.

Yes Deathlink, I already figured that out

I'm only trying to move certain things of your HUD, and then maybe try my own textures (although I can't open and edit DDS files atm).

I'm only wondering how big the grid is it uses for values in Hud.ini (X and Y positioning) . As I'm trying to move things (Boxes with icons) to different locations over the screen.

I tried to find the X middle, but I couldn't really find it. It has to be somewhere between -710 and -690 (with 1280 X 1024 reso). Next to that, I was wondering what the lowest and highest X and Y are for the grid As it would be useful for moving boxes and icons etc.

And what Caveman said would be useful, I had the same problem while using this HUD, and turning the value on in HUD.ini that causes the 'thing' to flash when you are below 50HP only results into flashing health icon in the middle of your screen without any value next to it (value for the amount of HP: 1-50).

bhs.txt says:

The 0,0 point on you monitor is in the left upper corner if you use only positive values.

For other Kombinations:

X>0 Y<0 -> 0,0 is in the left lower corner

X<0 Y<0 -> 0,0 is in the right lower corner

X<0 Y>0 -> 0,0 is in the right upper corner

The grid is one pixel of you screen-res.

TEST IT!

I don't spend more time for this hud and in addition I don't know how to make sth. blink and I don't want to. We've done enough and I'm glad that is finsihed the way I want. There still some bugs left to fix (icons-colorscheme still doesn't work but I don't need that in my HUD).

Have fun with source. I'm waiting for your bugfixes and features now.

HideInfoBox=true --> false

If you put it on false, the Default Renegade HUD (or skinned version, if you are using a Hud_main.dds in your data folder) will be shown under the HUD of Deathlink, but this default Renegade HUD also shows a Health Icon in the middle of the screen, if you purchase a new character, or if you are below 50 HP --> Health Icon will then flash red.

It doesn't contain any value next to it (amount of HP) + old default HUD is shown under the new HUD.

Any ideas how to activate only the renegade health animations, without to activate the whole renegade HUD again?

Yeah, you don't. Those things just don't translate. An animation for the new health needs to be programmed.

Would you be willing to do this? Please?(I know its not your responsibility)

Its really hard to use this hud when the hp doesn't flash

I can't understand why people don't release their stuff. What is the exact problem?

Are you afraid that stupids make shit with it? Then we shouldn't release things at all.

Are you afraid that stupids make shit with it? Then we shouldn't release things at all. Personally i've just started working on the building part of the hud using the existing code in your shaders_hud.cpp file as well as other function calls part of it. I'm not doing it to "gain an advantage" or "cheat" but more so of a just a way to expand/learn more when it comes to c++. I'm doing it from a programming perspective moreso then a game advantage. Ive already written the code and have properly displayed building healths as integer, and will probably add "health bars" similar (pretty much attempting to be identical) to your sample hud.

Will I release it? no probably not. There's to much drama/argueing/discussion that will occur because of it. If some people were to ask me to see the code to use as reference or to add there own, i'd most likely send it to them however to publically post things such as is an invitation to be mocked/shunned from the rest of the community (look @ scrins huds)

This is similar to my xwis mirc script which was based off of v00d00s original script. Fully works, and ive added many new things to it to use the full use of the xwis protocol (server ips, player ips/scores/stats etc .. everything) however im hesitant to release it due to the backlash from the community as well as abuse of the script by the members themselves. The script would also display the xwis protocol which then could be manipulated to do other things. I know other versions of it exist, however to make the code public in such a main location such as these forums is just asking for trouble.

IDK thats my view from the whole thing.

I personally appreciate all releases by members of this community, maybe someday i'll release something as long as i beleive it won't be to controversial.

I already know to answer to my question but I want to hear it from the people who do it.

When i say existing code i mean for example, displaying the health value on the hud. When i opened the scripts solution i knew absolutely nothing about its setup, and what files did what and where i could need to place the proper code and methods to call in order to actually do anything. After spending a few hours for the past couple days ive managed to learn off of it. The actual code or algorithm to display building stats onto the hud is not publically released to my knowledge.

As for your question of people not releasing stuff when there is no negative aspect about it, I dont think there is really that many features or "Fixes" people have but have not released.

In terms of server side stuff, many server owners/admins/coders for the server want to keep there stuff private because it adds a sense of individuality and uniqueness.

For example, n00bstories was the first server to have a reserved slot system thanks to SK, however to remain unique and have this feature as a bonus it was kept private.

Can also point out the simple fact, people are selfish

Just an addon , this is my progress so far:

<http://www.n00bstories.com/image.fetch.php?id=1111788420>

Cropped due to windowed mode. Shitty quality due to shitty quality file save. The red font is actually clear heh.

As you can see, i've used your hud files (thanks again) and moved/resized them to my liking.

If anyone wants i can post my changed hud.ini file (WITHOUT the building stuff)

***** EDIT

Just to clarify, I am not doing this to gain an advantage or to cheat. Just trying to expand on my lack of c++ skills.

I found a bug:

With the default HUD, when you aim the turret in any direction, the radar spins facing in the same direction you aim in.

However, with this new HUD, aiming in a direction doesn't spin the radar, only turning the vehicle does.

It was a pretty useful part of my gameplay to move the radar around willingly like that. It would be great if you could fix it.

[View Forum Message](#) <> [Reply to Message](#)

Saberhawk, that's awesome. I didn't realise it until after using this HUD for a while, but not being notified of low health is a deal breaker. It's ruined me in battle more than I can count since using this new HUD. I guess I never realised the flashing of the HUD was something I relied on so much.

As per the text sizes mentioned earlier, I don't know offhand. The most common text, like names, chatbox, and menu text scales with resoluion. At 1024x1024 and 1280xwhatever, it's one size, and at 1600x1200 or 1680x1050, it gets bold. The text for the scores, however, doesn't scale, so at larger resolutions, it's hard to see. One of the values in stylemgr.ini might change it, so check around in there (back up the original first). I had to change one of the values in that file because with the text scaling up at 1600x1200, it made the text overlap the building health bars too much, so I had to make it smaller (which then makes text a bit smaller). I wish the health bars scaled too, because they're WAY too small compared to the text for them at 1600x1200 and 1680x1050, let alone anything higher (1920x1200, 2048x1536, let alone 2560x1600).

Yeah I didn't realise how much I actually used it until it was gone and when it was gone I was going mad.. Dying left, right and centre. Its why I was so insistent on someone fixing it. Thank fully Saber took the time to stream his work to people in IRC so we could see how he was progressing.

On a side note I didnt know Ren actually supported 2560x1600. I would like to see a SS of that.

To be honest, when testing, I thought that the lack of the "low health" heads up would ruin me, but it really hasn't as bad as I thought it would.

It's good that it is being added anyway.

Is it going to be added for the ammo count too?

To deathlink: I Noticed there is duplicate code in hudshader at the very top of void __declspec(dllexport) UpdateHUD2(). Theres duplicate loop code for texture loading.

Saberhawk sent me a snippet of the code he has for the blinking, I've implemented it in my setup and i must say it works brilliantly. So just want to say big thanks to deathlink for his hud design and the base code for health bars, and saberhawk for giving me help on some c++ issues. Also jonwil and anyone else who helped with the shaders.dll / scripts.dll hud stuff. I'll post a video of it later today with what i've come up with.

OMGRELEASE!

The custom shaders.dll included with this release requires the DirectX November 2008 Runtime to be installed in order to run. If you do not have it, it will tell you.

You can download it from:

<http://www.microsoft.com/downloads/details.aspx?familyid=2da43d38-db71-4c1b-bc6a-9b6652cd92a3&displaylang=en>

Be sure to follow the instructions in data/readme.txt to actually enable the added features

Enjoy.

Im surprised no one has brought up this point, but showing the mine count is much more a cheat then when ppl said showing the base health is one.

In small games ,when knowing where the other team matters mos,t u can tell if someone has gone through ur mines. Thats by far more useful then when ppl said that building health bars on the screen is a cheat.

Press K and the hp of buildings appears instantly. Use the hotkey for mines and if u keep pressing it, it will only appear every 3-5 seconds. You will know instantly if someone is in your base and that can change a game tbh.

Not a huge deal, just found it strange no one brought this up(if they did sriry i didnt read every post)

Btw does the mine count show up if the server doesnt offer commands such as "!c4"

Chuck Norris wrote on Thu, 01 January 2009 19:47I get it to work, but only for infantry. It doesn't flash or show when my health drops when in a vehicle.

Your right, saberhawk must have forgot to add it

in minihealthhud.cpp Look for this line::

```
float current_health = Commands->Get_Health(obj);
```

Replace that with this::

```
float current_health = 0;
if (Get_Vehicle(obj))
{
    current_health = Commands->Get_Health(Get_Vehicle(obj));
}
else
{
    current_health = Commands->Get_Health(obj);
}
```

I highly doubt it can be abused. There is no effective way of using that stat against the enemy team for it to be considered unfair or a cheat. Unless of course you are planning on sitting there doing nothing just watching that counter for any sudden decreases, in which case you trade off being helpful on your team to being dead weight who is just watching a mine counter to see if mines go down. (Which you can do just as easily if you just watch for an explosion in your base)

R315r4z0r wrote on Fri, 02 January 2009 14:18 I highly doubt it can be abused. There is no effective way of using that stat against the enemy team for it to be considered unfair or a cheat. Unless of course you are planning on sitting there doing nothing just watching that counter for any sudden decreases, in which case you trade off being helpful on your team to being dead weight who is just watching a mine counter to see if mines go down. (Which you can do just as easily if you just watch for an explosion in your base)

Put it this way.

I played last night in n00bstories for a good hour or soo, and a good 40 players at that

- I never looked at the mine count
- I never looked at the remote c4 count
- I never looked at the timed c4 count

-I glanced at the building health bar when i heard "X Building is Under attack " and saw that there was no health changes

-I glanced at the minimap once when i was driving backwards and fighting a tank just to guarrantee I wouldnt hit one of the rocks on the map and yet i had an easier time doing it from memory rather then the image.

You know what actually helped me the most? The flashing health in the middle of my screen informed me when i got hit fighting a sniper, or when i was starting to get owned in a tank fight.

I'm the same way. I play it better from the actual experience of having played the game for a few years than from using a "cheat" (rather, what would be called an advantage) that I've recently obtained. Even when my Building Health Bars enabled, I still hit K, then think, "Oh, what the hell am I doing?"

I'm actually a fan of the original HUD, it's quite nice when skinned up a bit. However, I really love the ability to move parts of it around and make it look a little fancier or more modern than the original. Personal preference, I guess.

I don't even have the minimap image of the map. I didn't even try it fix it though as I'm used to not

having it.

Edit:

This is probably not a big deal or maybe not even worth mentioning, but I'm just going to point it out anyway:

Watch the flaming.

I do agree though. With only a couple people there is an easier chance that someone could invade and destroy your buildings without a prior warning first.

I don't think a HUD needs this feature, though.

K SRY 1VS1 NAO PLX G?G CW E-PENIS CUP NAO I REAL PRO.

I think i just summed up cw faggotry in under one sentence.

Renegade was definately not designed to be played in a 1vs1 - 2vs2 enviroment. Not to mention its boring as fuck.

Its ironic to be called a moron from a cw guy who thinks small cw games = real renegade.

But besides the fact, this isn't what this thread about so take your lame insults elsewhere please.

"Real Renegade" is playing on massive servers using strategy to out play the enemy team. Small CW games prove absolutely nothing in the ways of a skilled player. It only really proves a few insignificant statistics of a player such as:

- How daring they are when they go offensive
- Their main combat reliance
- How fast you can destroy an empty base

If you think small CW games are how Renegade is meant to be played, then I seriously suggest you find another game to play. Counter Strike sounds like the type of game you would be interested in.

However, more onto the point, even in small 1v1, 2v2 games, the mine meter will barely help you at all. Seriously, have you even attempted to try and use it? You might notice it when you play by yourself in a LAN game, however when you are actually playing other people, it kind of gets in the way to look at a counter in the corner of the screen instead of what you are doing.

It will only cause you to do worse if you constantly stare at the counter and wait for it to drop... especially if the server has the !c4 command available to use.

Not the right topic to argue this.

(Small clanwars being 3v3-8v8)

I say its real renegade because public servers are almost no challenge, as opposed to clanwars. (and tbh smaller games require more strategy because large scale games can easily win with pure force)

Are there plans to do the center screen counter (like for the HP) but for the ammunition? It isn't really important, but I figured it would look better being symmetrical and all.

Edit: this image is from another thread:

To do the mines/remotes/timed thing this is what i ended up adding:

```
if (RenderMinesText)
{
    MinesRender2DClass->Reset();
    RectClass *r = (RectClass *)((char *)MinesRender2DClass+0x5B8);
    float Mines = float(Get_C4_Count_Proximity(Get_Player_Type(obj)));
    float c4 = float(Get_C4_Count_Remote(Get_Player_Type(obj)));
    float c42 = float(Get_C4_Count(Get_Player_Type(obj)));

    r->Right = MinesPosition->X;
    r->Left = MinesPosition->X;
    r->Top = MinesPosition->Y;
    r->Bottom = MinesPosition->Y;
    char text[20];
    unsigned int h = (unsigned int)(Mines + 0.5f);
    unsigned int j = (unsigned int)(c4 + 0.5f);
    unsigned int k = (unsigned int)(c42 + 0.5f) - h - j;
    sprintf(text,"%d : %d : %d",h,j,k);
    unsigned int color = MinesColor;
    MinesRender2DClass->Draw_Text(text,color);
    MinesRender2DClass->Render();
}
```

I couldn't find a command to get the timed c4 count, so i figured why not just subtract mines and remotes from the total

This will output mines : remotes : timed for your team. Its actually extremely useless but i figured why not

OMGRELEASE!

The custom shaders.dll included with this release requires the DirectX November 2008 Runtime to be installed in order to run. If you do not have it, it will tell you.

You can download it from:

<http://www.microsoft.com/downloads/details.aspx?familyid=2da43d38-db71-4c1b-bc6a-9b6652cd92a3&displaylang=en>

Be sure to follow the instructions in data/readme.txt to actually enable the added features

Enjoy.

Updated version, only fix included is the one for the mini-health item not working on vehicles.

One more update, this version also includes a mini ammo display on the right side. Be sure to copy the new texture and new entries from data/readme.txt to have it fully working.

I will be releasing a package later this weekend. I just want to do a bit more testing + cleanup a couple things. It will also include the deathlink hud.ini configuration as well as my custom configuration of those settings. Source and all necessary files are included within it:

This is from the readme file:

Quote:=====

Features:

=====

This HUD release is compatible with renguard.

This HUD is resolution independent

This HUD displays the current map instead of the radar, displays health, shield and ammo bars. Mine count for clients team is also displayed

Faded notifications are displayed when ammo or health has changed

=====

Credits

=====

The HUD includes map images which were released by Canadacdn on renegadeforums.com

The HUD includes fixes, textures, and colors which were released by DeathLink6.0 on renegadeforums.com

The HUD includes faded health and ammo notifications which were released by Saberhawk on renegadeforums.com

I give full credit to the above people for their work

=====

What I actually did

=====

The HUD includes changes by me to how loading of map settings are done.
Map settings are now found and loaded from within hud.ini with sections of [mapname]

This removes the need for individual <mapname>.ini files and allows it to be compatible with renguard.

The method of <mapname>.ini files are still compatible with this HUD.

If the section for [mapname] is not found, shaders.dll will attempt to load <mapname>.ini
If <mapname>.ini is not found, the default texture for the map is found in hud.ini as <<
ScrollingMapTexture= >>

Too bad you didn't add building bars and 'All C4 count' to the HUD. I already got a version of shaders.dll which has the C4 count for all three types of C4, but not building bars.

I understand the decision and i slightly expected it already, that releasers wouldn't include those features

I could easily add my building bars with this release, however to much controversy. If there seemed to be a more acceptance for it I'll release the new rewritten code I have it the works.

I know Ive seen the top and bottom together on this hud, someone should be able to help or send their hud.ini.

<http://www.renegadeforums.com/index.php?t=msg&th=31530&start=0&rid=2> 1670

more specifically:

<http://www.n00bstories.com/image.fetch.php?id=1315771622>

radar is too small

So then edit the hud.ini file and use only the health/shield code? It really isn't difficult to copy paste and delete a few lines.

only bug i've found that appears to be caused by the HUD is when i quit ren, it comes up with a "not responding" type msg. i just hit close program, not really a problem but just something that happens.

I'd like to kno how to make the overhead view a little bigger tho so i can view more of the map.

I'd like to know how to make the overhead view a little bigger though so I can view more of the map.

search for
RadarSize=140
RadarWorldSize=100

bhs.txt says Set RadarSize to the screen size in pixels to use for the radar

Set RadarWorldSize to the size in the game world that is to correspond to the radius of the radar

For a year or something (released versions to the public). It isn't compatible with RG though, BUT andr3w282 made a version which is compatible with RG:

<http://www.renegadeforums.com/index.php?t=msg&th=31530&start=0&rid=2> 2151

@ Saberhawk and/or DeathLink...

If you want to fix the Camera Direction problem, just follow these instructions in the shaderhud.cpp file.

<http://abyss.syrkel.com/ngeeb2i280>

Enjoy!

I've a problem using this nice HUD with this shaders.dll :

Installed it on 2 computers. Works, until I leave the game. If I click "Yes" while Renegade is asking "Quit to desktop?", the game crashes and the PC hangs up and is stoned. Only resets helps then.

Same result on 2 computers.
Resolution is 1280x1024 / 1400x1080.

I tried the modified shaders.dll posted here in this thread, but then the little map-overheads dont show up?!?! But then the game didnt crash.

So, its a problem with the shaders.dll...anyone knows a fix that works???

Soo far all i can seem to find in my own testing and debugging is errors upon memory cleanup on a few commands. I've even commented out those commands just for testing and the problem still

seems to arise in some other part of the shaders.dll / renegade / bhs. The debugging on the error is all in ASM so that is not quite to my level yet, but the parts that i did comment out which were throwing off errors were safe_delete in saberhawks hud item classes as well as my own classes. Even with all that commented out the error still persisted, somewhere there is a line trying to cleanup some memory and the memory isn't accessible.
