I just got a Creative Fatal1ty headset and it sounds awesome in all other games. However, in renegade I only get sound out of my right ear when I shoot in 3rd person. In first person it sounds fine. Anyone have any suggestions.

I've looked for drivers and can't find anything. I've gone through and changed the sound to 2 speaker, 4 speaker, headset, and surround sound. None have helped.

I assume you have a decent soundcard and a headset that supports surround sound. Check renegade audio settings and choose stereo. I had similar problems when had my 5.1 driver as sound output selected.
