SEE BELOW FOR DOWNLOAD LINK

I'm doing a remake of C&C_Hourglass where flying vehicles will be allowed. The map features all new terrain geometry, textures and props. Nothing has been recycled from the original.

Pics: <http://www.apathbeyond.com/forum/index.php?showtopic=18629&hl=C&st=0>

Make sure to look at the bottom for the most recent pics.

However, I noticed that the buildings do not appear darkened when they are destroyed. The interiors look fine, but it's hard to tell that a building is destroyed from the outside. I also noticed that most fan maps suffer from this, yet I know neosaber made fully destroyable buildings (I cannot find the download for this).

Can someone point me in the right direction?

I also want to know this! Anyone knows how to do this?

Nice work on your Hourglass map by the way!

No link? I actually found it:
<http://www.apathbeyond.com/forum/index.php?showtopic=18629&hl=C&st=0>

Anyways, good job, keep it coming man, its gonna be good. And, the first 2-3 pics, what program is that that your using to make the terrain? Is it something special? lol

Edit: link was to YouTube - Adanali :S

I have another Idea, Attach a Script to the Building Controller (JFW_Death_Send_Custom), then Create a Daves Arrow attach a Script to the Arrow (On Custom Create Object) and fill in a bew W3D for the new Destroyed Building Model Building woudnd turn black but you can create some more flames etc

YazooGang wrote on Tue, 06 January 2009 15:15And, the first 2-3 pics, what program is that that your using to make the terrain? Is it something special?

3Ds Max 8 W3D Modeling Edition.

So maybe I can make it that on destruction I put a huge and obvious flame and smoke emitter? I also have some new smoke for the powerplants/wf and a green smoke emitters for the refineries but don't know how to hide them when they are destroyed. Would this be done the same way?

The guy working on it has not finished it. It may work with Renegade with some tinkering but it would not be efficient, as it uses alpha masks to specify where to put what texture. Renegade is not designed to render what this will make efficiently. It has enough problems rendering simple vertex blended textures at a decent rate.

Di3HardNL you should be sorry! Stop derailing!

Known bugs:

- Hand of Nod and Airstrip hut windows do not break correctly.
- AGT has certain meshes that do not register as part of the building, and the building controller needs to be lowered to lower the 4 machine guns.

Please report bugs, screenshots or general comments!

[View Forum Message](#) <> [Reply to Message](#)

Make sure you've waited for all the textures to load. I'm assuming by lag you mean a low framerate. On my computer I get a solid 60 fps. It performed fairly well on a crappy pc as well.

Subject: Re: Release - C&C_Hourglass_Flying_BETA
Posted by [u6795](#) on Thu, 08 Jan 2009 23:02:51 GMT

[View Forum Message](#) <> [Reply to Message](#)

It runs alright on my computer but there seems to be a noticeable amount of missing textures. Nothing too bad though.

Also, I see you like Tiberium crystals. Very sexy.

[View Forum Message](#) <> [Reply to Message](#)

I'll further the point of heavy performance. I was surprised to start this map up and be greeted by a frame rate in the thirties. I usually get a solid and constant 100FPS (and if I disable v-sync, it's closer to 200FPS, usually more even). That's the difference between most maps and this one.

However, I do play with these options.

Resolution: 1600x1200
Anisotropic Filtering: 16x
Anti-aliasing: 8x (although I see no difference between it and 4x)
Anti-aliasing Transparency: enabled (Supersampling)
Shaders: enabled

Note too that I do strive for a constant 100FPS. I do see the difference between 60FPS and 100FPS, and in Renegade, I'm so used to the latter that less feels laggy, especially in the thirties.

Still, these settings work for most other maps, and my hardware is pretty good.

CPU: Core 2 Duo E8400 @ 4.05GHz
GPU: nVidia GeForce 8800GT OC
RAM: 4GB

I had to disable the Anti-aliasing transparency (although alot of foilage is known to lag with it set to Supersampling), turn down Anisotropic Filtering from 16x to 4x, turn down Anti-aliasing from 8x to 2x, and still didn't get my usual, but it didn't go much below 60FPS then.

Also, I want to note that it's worse in GDI's base than it is in Nod's.

I know I play with higher settings than most, but my hardware is severly overkill for the game. Most people with less will have to tone down the settings much more.

As for bugs, I sort of found one. An Orca is able to get stuck here. Yes, I know vehicles aren't supposed to go in there.

Toggle Spoiler

Besides these things, it's a great map. I like the rocket pods on top of the Advanced Guard Tower.

u67951, what textures are missing?

Chuck Norris, I play in 1900x1200 with the same specs and I rarely drop below 50. From the info you posted we have fairly similar computers. Most of the time it stays at the 60 fps cap. I'm expecting a drop in framerate, as this map is a lot more complicated than stock MP maps. You may need to drop that AA to 2x or something.

Known Issues as of now:

- AGT gun placement
 - HON/STRIP hut windows
 - Tunnels need vehicle blockers
 - End-game beacon zone not defined
 - Infantry kill zones needed on rooftops to prevent cheap beaconing (no building ramps!)
-

Whenever I'd look around, mostly towards the middle of the map, my fps would go down to around 4 or 3. I've been playing it for about 5 or so minutes, exploring, my fps remained the same way though.

mjfabian wrote on Thu, 08 January 2009 18:32u67951, what textures are missing?

Seems to be some sort of view distance error now that I look at it again. Here's some screenshots to show you what I mean.

And then, when I move, the no-texture area shifts-

I don't know much about Renegade's coding, but this just seems to be a sort of draw distance thing. Probably my problem.

I really like this map, its very well made with alot of detail.
I notice an FPS drop but the map is still playable for me.

Only thing im not to keen about is the tunnel that leads to the back of the GDI base and into the Power Plant making it vunulrable.

I havnt seached enough but im guessing there is a tunnel to Nod's Power Plant aswell. This wouldbe good on other maps but for a map like this it kind of changes the kind of gameplay involved in the map.

In my opinion Hourgalss is named Horugalss because the game is more likely to end with the time limit than 1 base being destroyed.

There are tunnels going to both base power plants. The vulnerable buildings (not protected by heavy defenses) are the HoN and the WF, which I consider of equal value to their respective teams.

Does ANYONE see grass and dirt instead of dirt and black?

P.S. Hourglass is named hourglass because it is shaped like an hourglass, not because of the timing of rounds. I thought everyone knew this...

Might be a good idea to implement a VIS system on that map (considering you have flying units enabled), Would likely help most players combat lag/vis issues. The black areas might be due to the alpha blending not set up properly? (i.e VAlpha enabled on mesh).

[View Forum Message](#) <> [Reply to Message](#)

u6795 - I'd be willing to bet that if you had a vanilla data folder those texture problems would go away. Since almost no textures are from the original game, and some of those come through just fine, it's the only solution I can think of. Is there a grass.tga in your data folder?

Updated known bugs:

- AGT gun placement, some parts of AGT don't register as part of building
- HON/STRIP hut windows do not shatter correctly
- Tunnels need vehicle blockers, including tunnel hole entrance where Orcas can get stuck.
- End-game beacon zones not defined
- Infantry kill zones needed on rooftops to prevent cheap beaconing (no ramps!)
- Boulder near GDI Barracks missing collision settings
- In the middle tunnel (under the hill), the east exit that leads out to the dirt path is textured incorrectly.
- Build Dynamic Culling System needs to be run to squeeze some extra performance (VIS sectors will most likely not be done)

You really should do what genblacky said and build the vis system.

If a pc like the one chuck norris has suffers from severe framedrops then there is something wrong.

Since you have a lot of small details like the grass in GDI's base it is important you should render visibility.

Posted by [Fabian](#) on Fri, 09 Jan 2009 16:18:56 GMT
[View Forum Message](#) <> [Reply to Message](#)

I don't know what you mean by resolution in that context.

As for FPS drops:

I have still not decided whether I'm going to go through with VIS. All the VIS in the world won't save you if you simply have an old shitty graphics card. There's just way more to calculate compared to old Westwood maps. Given the AA and AF settings Chuck Norris has, I would not say that something is "wrong" with the fps rate.

I didn't ever build the dynamic culling system in LevelEdit. If that gives enough of a performance boost, I won't bother with VIS. Someone with a Pentium III and GeForce 6400 who is complaining about their 20 fps will not get much sympathy from me.

-edit- LevelEdit crashes when I try to do VIS, even with visual themes disabled.

[View Forum Message](#) <> [Reply to Message](#)

Because there are tons of brand new textures instead of stock Westwood ones. The final version will have all .dds textures, so the download size (and maybe performance) will be better.

If there is no Vis data then that explains Chuck Norris' problems, as he is rendering loads of things at high detail, then overwriting them. Do at least generate vis for the final map, because otherwise older PCs will actually collapse.

Only speculating on the cause of the framrate issues which might be caused by the amount of poly's and/or textures used (I was told the engine can handle high poly's but isn't so good in processing high amounts of textures?)

Here is a quote from the vis tutorial created by YSLmuffins some time ago..

Quote:Now, setting up VIS properly can be time consuming, and most smaller maps should do fine without it, says Greg Hjelstrom, lead programmer for Renegade. On bigger, higher poly maps, though, VIS is a must—and if there are parts of your map where the FPS drops dramatically, you'll want to seriously consider setting up VIS for your map. Besides, all of WW's maps have a VIS system in place!

Considering you have a massive amount "grass" meshes and such this might be a cause?. Like i said i'm only speculating on what might be causing it. Someone else might have a different opinion.

Also suggest reading up YSLmuffins tutorial on VIS on Renhelp.net for more info on the subject.

Same thing here (crash) im using the shaders for the deathlink hud. When it crashes it loads the map and I hear "unit rea..." So its crashing when the harvester is being made.

I happen to look inside the .mix to see why it was soo big... When you export from LE, make sure you compress textures, this will be a big boost in frames for those having problems.

Edit: I see that you are going to compress.. good idea, and happy to see VIS being generated, Ive done it for all of my mid to large maps, small maps dont really need it like a DM map... anything else should use it...VIS work is always a pleasure

Since renegade doesnt use bot's, you can save time and create a box only in the pathfind area for harvesters, and dante had said awhile ago to fly atleast 300m below the map and VIS generates faster, I notice a great improvement in time with this method.

the best way is to let it chug on another computer, a flying map takes a good 24 hours on my old desktop, Im guessing with your specs it should take around 12?

Make sure you find out why its crashing with scripts 3.44 too.

This. To the people who are like "add vis, do it now", it can take several hours to generate vis. Just wait until the map has all the bugs worked out and is ready to go before complaining.

I am aware it takes a long time to generate, but I did say "at least for the final map".

Awesome map, but some important bugs that hand quite an advantage to Nod:

First, the air tower is not targetable with a med, only the actual strip! This is a bit unfair, but worse is to come...

I then tried to use C4 on the strip MCT, assuming that the scripts were in place to destroy it. They weren't.

That strip should be dead, as I used my hotwire's two timeds and a remote, it has taken no damage!

As for the FPS issues, I get a steady 45+ when playing by myself, and 60 in the tunnels. I have AA turned off as I notice no real quality improvement, and it just slows down.

No more crashes, and the map is looking great, not sure if you have a bug list, but everything I found is minor fixes. Lowest FPS were 55 for me.

www.wpi.edu/~mjfabian/C&C_Hourglass_Flying_095.zip

As the name suggests, VIS isn't done in this version. I'm doing that right now. Please look at this version and try and find errors. There are infantry kill zones on the roofs, so roof beaconing is not allowed. The VIS version will be done shortly, but as many people know it is a tedious process. Other than VIS this is a final version.

Its an extremely nice map, but there are a few balance issues I noticed, like, the MRLS can shoot the obby from three spots while remaining out of range, while the arty can only shoot the guard tower from one. I noticed there are no bullet holes in one tunnel and finally, and finally the water in the water fall looks kind of fugly.

what the hell are you talking about??? the waterfall is awesome looking and the river down below with the splashing water against the rocks is just fantastic, along with the tib effects. The detail on this map is far better than any ren map I've ever seen. If you've seen better please tell me the map cause I've seen them all.

Only thing I see about it is the OB range could be longer but I'm going to use the map as is and

run it on Unrules and Renbattle.net servers.

Only way to really test this is with a server full of people.

But either way the guy did a fantastic job on this. Best Ren map I ever seen.

Its not in the rotation its just on the server for testing and fabian knows that. talked to him all last night about the map.

on further review, the ob firing range is fine. you can hit gdi with arties in several positions not just one. over the top is pretty much even for both teams.

then you didnt download the lastest version.

here: www.wpi.edu/~mjfabian/C&C_Hourglass_Flying_095.zip

Ok after further review. Id remove the trees near the OB. You can fly and orca right to it and the ob will never fire. Id also add ramps and remove the killzone because its not constant in all areas. Id also add a no fly zone over the pp stacks.

Don't get me wrong love the map. Still one of the best I've ever seen. Great quality. Can't wait for the finished version

These bugs I will post are different from that doesnt looks nais.

I would really recommend you block the waterfall differently now if you drive over it it looks like your floating with you vech. A small cover should be sufficient.

Atm you can fly to the strip with an orca without being killed.

For the rest I have screenies.

If you look closely you can see a small gap between the ground and the rockwall.

You can fly in buildings with ease.

I know you don't want ramps on your map but these non flying setup buildings will have vis problems + maybe other problems.

Like you can fly through the WF smoke pipes.

Plus you can get an APC stuck in a barrel.

I like the method of blocking beacons on top of buildings but I would advise to use flying building setup.

You are nearing a good map release just fix what needs to be fixed. Mostly it are minor details.

Subject: Re: Release - C&C_Hourglass_Flying_BETA

[View Forum Message](#) <> [Reply to Message](#)

IMPORTANT: REMOVE ALL OTHER "C&C_Hourglass_Flying_xxx" files in your data folder. The only files in your data folder pertaining to this map should be C&C_Hourglass_Flying.mix (and .thu if you've run the map). Having other versions will cause collision errors and will cause missing textures

On a similar note, people are still seeing the ground as dirt + black instead of dirt + grass. Clean the shit out of your data folder. Something in there is messing with the map textures. For example, Reaver11's screenshots show what you should NOT see. Make sure there isn't a grass.tga or grass.dds in your data folder.

First, I'd like to thank everyone for looking for bugs. Second, I'd really like to see a couple large games to confirm that the ranges of the AGT/OB need to be changed. I'm kinda uneasy about

changing stuff like that (although I'm told some official maps have custom ranges).

Also, there will not be building ramps. Ramps make roof beaconing legitimate, and if there's one gameplay change I insist on making in my map, it's roof beaconing. Currently if you try to roof beacon you will die.

As for the waterfall being ugly, Renegade isn't high in the special effects department. This is probably as good as it's gonna get on this engine. I think it's certainly an improvement from the waterfalls in C&C_Hourglass.

I guess I'd better start a bug list:

- The ranges of the AGT and Obelisk need to be looked into.
- The blocker for the "waterfall hole" for vehicles should be a simple manhole cover. Currently it is a slanted wall "leaning" against the cliff.
- Hand of Nod and Airstrip need vehicle blockers so they cannot enter the buildings. To be safe, put vehicle blockers on all building entrances on both sides.
- The War Factory smoke stacks are missing collision settings.
- There is a geometry seam on the left side of the underground river where the cliff meets the ground.
- barrel.w3d needs to have an invisible vehicle blocker around it to prevent people from getting stuck on it in vehicles.
- The large deciduous tree and grass around the back of the WF are floating.

Finally, here's a map of the level. You can use it to point out "tactical" bugs. Things like, the AGT should be placed to here and have this range.

Dont forget to give the WF smoke pipes or what ever you call them a physical collision.

The point is I dont say you need the building ramps but in the flying building setup are vis parts for flyingmaps. If you are going to render vis you will need those.

Plus I can assure you I dont have any other version of hourglass_flying in my data folder then 0.95.

What I find weird is that the .thu gets to a size of 853KB which compared to my other thu files is big. (It could be an error my side im not sure)[Ill check if I can find what is really causing my problem]

EDIT: The buildings are to high on the ground. You basically have a doorstep. Which isnt good looking. You can better use boolean to remove terrain under the building and make sure there are no doorsteps.

Just a suggestion, but for the Renegade version could you remove the emitters on the tiberium crystals? They appear to cause a big drop in FPS, as for everything else it seems to be alright for the quality of the map, but the emitters on those crystals do take a lot more FPS. I get 15-30 FPS on this map, usually 15 when looking in the direction of the crystals and 30 or more when I'm looking at the rest of the map.

I really like you map, I think this will be map of the year for Renegade. Good work!

The dirt problem could be solved if you rename it, currently its dirt.tga, renegade reads from other .mix files and its possible someone used dirt.tga before.

Might want to consider making the barrels part of the terrain.

Collision problems as said, clone the windows of the HON and set them as vehicle blockers.

IM unsure on the kill zones, I thought APB had a disable beacon script of some sorts. Also, especially with a flying map it will look a lot better if you weld or snap the buildings into the terrain instead of placing them on top. This improves VIS also!

www.wpi.edu/~mjfabian/C&C_Hourglass_Flying_096.zip

-Vehicles no longer get stuck on vehicles

-Blockers around the upper river and waterfall area have been modified. The vehicle blocker for

the waterfall hole is like a manhole cover now.

-Range of the Obelisk has been increased. Obelisk can now fire you right as you go over the peak of the hill.

-Obelisk moved to the front and center. Some trees blocking the Ob's view have been removed.

-War Factory smoke stack collision settings are fixed.

-Vehicle blockers added to all building doors and windows.

-Geometry seam on the left side of the underground river where the cliff meets the ground has been fixed.

-Floating props near War Factory fixed.

-grass.dds and dirt.dds changed to mjf_grass.dds and mjf_dirt.dds to fix conflicts with other maps.

-Other random fixes I cannot remember.

I seem to recall the optimum strategy for custom maps textures was using:

*your name here*_texture name here*.dds

for all your texture names, as that removed naming conflicts...

Last version before VIS. Really this time.

ive added this to our rotation, and although i dont have a problem with the map, i noticed a lot of players have issues with a big decrease in fps.
I think this is one of the few maps ive seen in renegade that i really like, im a graphic bitch myself (Crysis Wars).

many people play normal AOW here but if you wanna try this map in our gamemode then maybe you will get new ideas for this

server info:

WHy couldn't westwood put more detail into their maps D:

Im getting good fps all around, except if Im in 1 base and I look @ the hill then it drops to about 80-100, nothing to whine about.

I have all the bells and whistles enabled like chuck, although atm, I am severely limited by my current monitor which is an old 17 inch crt that limits me to 1280x1024. My system specs are a tad bit under Chucks
