2 scripting questions...

1) Is it possible, to have scripted blockers to set in LE (or RenX), which block only NAVAL vehicles set up through "Expanded Vehicle Factory set of scripts by Matt Bailey 'Whitedragon'" ???

Goal would be, that ships CAN NOT drive from sea to land, but for instance tanks, which are transported via a hovercraft, CAN move from sea to land.

2) Concerning the mentioned Expanded Vehicle Factory set of scripts by Matt Bailey "Whitedragon":

I added a preset and set it up in the script parameters as a naval vehicle, but its still delivered through airstrip. The parameter string, which determines the naval vehicles, seems not to be updated?????????????

Use a poke 'n buy setup.

"JFW_Preset_Buy_Poke"

Preset_Name: the preset to spawn

Cost: the cost of the preset

Location: The Vector3 location where to spawn the Preset_Name

Player_Type: The team that can poke the object.

Basically, what you would do is setup a Generic_Switch (or something else you want; maybe a custom Terminal?) and attach that script.

Go to where you want the object to spawn and "Make" a Dave's Arrow. Double click the dave's arrow and take note of the coordinates under the "Position" tab. (it'll be the top set of coordinates).

Go back to your terminal that you want the player to poke and attach that script I mentioned

above, fill in the params and wham! You're good to go

EDIT: This should solve the problem about buying them right?

Also, the blockers..I don't know about those, I hope I answered what you were asking in the first question..

i dont have really problems about buying them, if you read my post exactly. i have an issue with the working Expanded Vehicle Factory.

the main problem would be to script, that the naval units are not allowed to drive on land.

solved problem #2, searched for hours:

It's an bug of the scripts:

You cannot use alternate objects in the purchase list as naval units, its presets are not recognized as such vehicles.

Actually, they get stuck when they go on land. You must have been playing on a server with the swimming scripts disabled.

Actually, they get stuck when they go on land. You must have been playing on a server with the swimming scripts disabled.

or an older version, without those scripts.

you have it so the boats can't go underwater, but the sub.s can... (assuming you do), can't you use simular properties to that?

EDIT: sry, dubble post, hit rong button
