Download WinRAR to open rar files and extract the contents to your renegade data folder.

Download 7Zip to open rar files and extract the contents to your renegade data folder.

Fixed it for you.

zip wizard  
winrar (best)  
7Zip

which opens .zip .rar and others

those pretty much is a file that has files compressed inside of it (think of a lock box filled with your stuff)

you extract it (as in taking it out) to anywhere you want (does not move the files just makes a copy to where ever you extract it to)

then place those files you extracted into your data folder

What program you use really only matters if you have a need to compress stuff to great degrees.  
For extracting you can use anything.

but it feels better when you do it from the command line.
