Hey I want to use the halolamp model, but I dont know how I can make the light so that it starts off sharp light then it gets transperant

Here is a screenshot. It shows the texture is the same color but what settings do I need to put?

I hope somebody can help.

Thats done using vertex paint, the the material needs two passes, one of the 2 needs to be completely transparent.

Possibly an easier way, if you have photoshop and know how to do an alpha channel, is if you just make n alpha channel gradient, on that texture, from black to white and then export it as a new texture.

Possibly an even easier way.  
Sample time.
