I finished another NOD building interior, this time it is the Refinery. Also now I know how to change textures when the building is getting damaged I am going to make a tutorial of it for those that don't know how to do this.

Here is the videolink! I hope you like it

Didn't you do this before?

Hmm, did the old one work?

If so, where is it, I been waiting to get it on Game-Maps for you.

The GDI one is lonely.

Seriously you should make all of the pts display the building they are in that would make for a nice pack of skins

you have to edit what files to get the PTs normal, as opposed to green? I would love to make non-collared PTs. (in you tut, include the PT changing part pz)

=samous

-sry i forgot to have this in first post

Could you instead of the crap audio you put in your videos put good music like Iron Maiden/Judas Priest/Slayer/Black Sabbath in it?

thanks for reply's i appreciate

and yes with the glass it was first just a simple plane with no segments. I used the 'cut'tool and simply cutted some pieces. Then select with polygons and detach the parts. Then you have like 10 meshes and give them the shatter option.

Im making a tutorial right now while modifying the airstrip. Its going to be huge lol

Hehe yes.

By the way I am working on my new airstrip now, I only don't know if im going to lightmap it since the textures are already pretty dark. This are just 2 screenshots of work in progress, its not finished yet.

nice, nice

I have a suggestion if you want, add some consoles ore something, to call the cnc130 plane.

YazooGang wrote on Thu, 12 February 2009 21:09What do those two little pinky text on the top of the window say?

"[EB] Running EBON.dll v1.0; by Stewie" and "[EB] Configuration rehashed." They're from my Reticle-per-Weapon DLL.
