If you can run 32 bit, you can run 64 bit..

..I think.

im running xp 64 pro. If you want to run, check ALL of your hardware being supported with 64bit drivers. Especially older peripheral equipment such as printer, webcam, scanner.... might have no driver support for 64bit XP.

Also check firewall and anti-virus programs.

Oh, and newest msn does not run on it. you need to downgrade to msn 8

It also helps if you have 64 bit compatible hardware, otherwise it won't even install, never mind work.

Pidgin

Annoyingly Vista lacks the ability to properly execute applications in 32-bit mode on a 64-bit system, but I believe there are some third-party applications that can do it for you.

BTW, every time you need to play a game on Vista, you need to right-click it and select 'Run as administrator'.

Dthdealer wrote on Sat, 07 March 2009 21:38BTW, every time you need to play a game on Vista, you need to right-click it and select 'Run as administrator'.

BTW, this is very bad advice. Most (99% of) games run just fine with reduced privileges, as they should. This *includes* Renegade. The only issue you may run into is a crash on startup because of retarded coding by Westwood. However, I created a launcher which fixes that specific bug when it's used to start the game.

Annoyingly Vista lacks the ability to properly execute applications in 32-bit mode on a 64-bit system, but I believe there are some third-party applications that can do it for you.

That's the first I have heard of that one, do you have some examples of those third party applications? I tend to just run 32bit apps that won't work in Vista x64 in a virtual machine...
