I wanted to play Renegade one day and when I turned it on, I tried to skip though the intro and get right to playing and it went back to the desktop!! I tried again without skipping through the intro and went to play online, When I moved or touched something on the keyboard it cut out to the desktop! So I played something else. Then about a week later I downloaded Renegade Alert (similar to Renegade except it is like Red Alert) That worked fine and I wanted to try and fix Renegade, So I went to the configuration thing and nothing new happened. Then I tried to uninstall it and install it again and when I went to the setup, there were no visible words! Luckily I remembered the setup and I got through it OK, when I went to play, I couldn't select anything and there were no words. So I gave up on that and went to play Renegade Alert, and the same thing happened!! I am so upset and bored. Can someone PLEASE help me!

Install Renegade as detailed here and see if that fixes it.
