Did you put your serial number in the file?

SSnipe if it was the serial it would be like creating failed to create sounds like ur server is crassing for some reason check everything out oh and when ur login fails check the account the server runs on i found the prob to one of my servers turns out that that is the prob. So i would suggest changing it the server probably ticks itseld off and restarts its danm self if u don't want it to restart switch the autorestart off.
