Yes I av installed the patches and scripts 3.4.4 I'm running a desktop PC (738mb RAM) with a Pentium 4 processor running at 2.0G and using an Nvidia 6200.

Whenever I try to play renegade both single and multiplayer the game freezes and I see the last frame it stopped at and the audio keeps going, however, Ctrl-Alt-Delete does not respond and I have to turn off my computer everytime....help?

That sounds like an overheating issue. Does this always happen at the same time?

Your PC seems pretty old, you may want to consider playing with an older scripts version or without scripts.
