I'd just installed Renegade on my computer for the first time so that I could play internet games. However when I connect and just before the lobby pops up the game closes.. can someone please help me with this problem? I'm on Vista btw..

Do you have a Firewall? If so that could be blocking Renegade from accessing the internet, try turning it off.

Yeah I've got Firewall but I'd unblocked it beforehand and I just tried turning it off and running the game but I still have the same problem. This is the error message that pops up btw..[/URL]

Are you running Renegade in Compatibility mode for XP SP2 and are you running it as an Admin?

Not sure, have you tried reinstalling it?

Yeah I just tried that too, still having the same "Renegade has stopped working" popup. Does it matter what version I have? Im at v1.20.0 atm I think..

Yes, you need to be at 1.037, the latest version...

Ok, I just patched the game and it made a SLIGHT improvement..now it gets to the message of the day and THEN closes.

EDIT: Nevermind guys, I read somewhere else and I knew I'd changed the file in \WINDOWS\system32\drivers\etc\hosts which prevented it to connect correctly. Thankfully it works now.

Thanks for all your help guys!
