here you can see head up display and mainframe terminal from canceled game by maggots from EA!!

(p.s. i can restore that as hud\_main.dds)  
but good job to all creators of that models and textures

ok?

Why the hell did you resize the image twice it's original size?

And I'm glad they canceled tiberium, it was going to turn out like crap, the art looks like a mediocre game 3 years ago.

In terms of visuals, I agree, it doesn't meet the standards for a UE3 game set to come out during mid-to-end 2009 (which I believe was the planned release range).

No one will ever know for sure, but from the gameplay information released by EA about this game, I doubt I would have ever liked Tiberium.

Funny how Tiberium was being made by the team that churned out most of the Medal of Honor games.

Those games were fucking awesome.

Face Palm.

OF COURSE IT WAS MADE BY THE SAME TEAM! That's why Tiberium was canceled in the first place!

The people working on Tiberium were MOVED to work on Medal of Honor instead. That's why EA said that Tiberium wasn't meeting standards, because no one was there to work on it.

Haven't heard about a new Medal of Honor in a while, and definitely never heard anything about movement. I read up a whole lot on the whole Tiberium thing, including that giant series of comments where it was basically the developers of the game arguing with people about why it

failed, and the general consensus seems to be that the team was disorganized, full of crackheads and the concept wasn't really working out that well.

By the looks of it, that game wouldn't have a standing chance against the current multiplayer games. The graphics look horrible and out dated. It was a good idea for them to cut their loses...although I do hope they give it a second chance and make another FPS like Renegade..

I think what I disliked most about the team working on 'Tiberium' was their attitude towards C&C Renegade. In an online interview they said that Renegade's C&C mode did not reflect that of a real C&C game, and that Tiberium would "fix" that. From the information released, Tiberium's multiplayer sounded a lot like Battlefield's "conquest" mode except with bots you can command, and the mode was numerously compared to the Battlefield and Rainbow Six series.

I'm not saying it would have been a bad game, because no one can make that claim as the game was not released. But, on a personal level, I probably would not have played it.

hes russian

hes too genetically inferior to understand that one can resize images and link to the bigger sized ones and that people might want to not have a gigantic sized image.

Some of the more devoted Senior devs blogged about it.

The team itself wasn't disorganized. They were pretty competent as far as process and organization goes. The problem lied within the management. Ignorant to the C&C lore, they believed that a new series/game project wouldn't earn as much money as the well known Medal of Honor. They slowly started to move the Senior devs over to work on MoH and hired on more Juniors to take their place.

Over the course of time, they slowly removed the junior devs few at a time until there was no work horse pulling the project along. It was just becoming wasted resources and nothing was being made. Hence EA's excuse that the resources were being poorly managed and the game wasn't meeting standards. And as such, the development was discontinued.

Unfortunately I don't remember where I read about it so I don't have a link you can check.

Comments like these aren't necessary. If you don't like our mod, then don't play it; it's as simple as that.

Quote:Ewww, those graphics actually look worst then renegade. I didnt think that was possible.

In many cases, yes, C&C Renegade and other W3D mods (like Reborn, for example) looked better than Tiberium. Granted Tiberium wasn't done, but it was two years of development and looked sub par.

The Unreal Engine 3 could handle a lot more.

I think the graphics look excellent. The textures could use better resolutions, but other than that I think it looked really cool..

And that's coming from someone who plays Crysis on a daily basis.

Edit: The original screenshots in the first post look like they were taken from a very low resolution. 800x600? I mean look how big the HUD is compared to other screenshots not to mention how pixilated it looks and how it requires a lot of antialiasing.
