You want some nice trees in endless variations and for every season in the year for YOUR map and you have no idea how to model and texture them?

Then you need this:

<http://www.frecle.net/forum/viewtopic.php?t=780>

tree[d] is tree generator and it generates random trees in nearly every level of detail you want. It comes along with its own textures for bark and leaves in .png. You can also let it create a model for every single leaf if you want but this would increase the triangel count dramatically.

IMPORTANT!!! The pictures below show a test with a detail level for Renegade (a bit higher I admit) but this tree generator is able to do this job 1000 times better for very high detail.

I tried it ~1000 Polys:

This is the tree in tree[d]-program:

Here the exported into w3d:

This is a small example what it can really do:

YazooGang wrote on Sun, 19 April 2009 08:39Man, thanks this is a good thing. Why didnt you put it in the Mod Release section?

Because this is not a mod release. This is an article about tree[d] here.

The random tree resized in LE:

Quote:A way to much Polys for Standard Renegade players
It is possible to user fewer polys.

Quote:Bushes also?
Yes. Just try it.

You need a programm which can convert from .x to .3ds e.g. 3D Exporation 1.5 or whatever.

Which would be a performance killer if video cards were vertex/polygon processing limited. But they haven't been for a very long time now.

How many years now? Mine is 7 years old so...

Old enough to barely run Renegade on Low.

How many years now? Mine is 7 years old so...

Old enough to barely run Renegade on Low.

Shouldn't a video card released the same year as renegade be able to run ren just fine?

I believe he wasn't saying that the 7 year old card wouldn't be good enough, he was saying a card that couldn't run Renegade on low wouldn't be good enough.

Think of poor me - I don't even have a graphics card. Mind you Renegade still runs fine at 1280x1024 without shaders and all standard Renegade quality settings to max on Intel GMA.

It's a nice addition to the modeling tools, but I haven't had a chance to fully test it yet.

Does importing the .x file into 3DS save the colour changes? Animations? Does it break every mesh into a group of polygons like importing W3D does?
