u mean dark as in black?  
then u have saved it as a wrong dds

i use paint.net to make skins and after i saved them as a .dds i have to convert them to the right .dds file with DDS Converter 2 i googled. that works for me =]

Try after you changed the weather in LE :

Lighting - Compute vertex solve  
Check occlusion

Maybe that gives result

Nvm didn't work Maybe its the baked lightmaps you can find in xccmixer

The lightmaps are baked into the model, so you can't change those. If you want to make it brighter, extract the terrain model, then re-import it into the game. It won't have the lightmaps after that.

Just open the field level file and delete the terrain instances and then recreate them without the lightmaps so u can change the terrain lighting.

Not sure why u guys are having problems , if u add something new to the map and solve the lighting it can turn water and stuff black because of the lightmap.
