Yeah, I guess I made it look okay for Windows XP. It started out as a small change and I ended up basically completely overhauling it. :S

And yes, I'm RenForum's resident Commie.

nikki6ixx wrote on Mon, 08 June 2009 14:49The /b/ shortcut on Dover's desktop made me giggle.

The icon set I downloaded had a few /b/ icons, and I just had to put that one to use.

Where's your desktop, Nikki! Show it! It's the law of this thread!

Pretty sharp of you, that indeed looks like a Cheat right there. It ain't a shortcut, cause there's no blue arrow with white background on the bottom-left corner, indicating a shortcut.

Printscreened in case he decides to remove it:

If he had placed it on purpose he would have told about it by now. Why would someone risk doing something like this?

And yes, it's not a shortcut, it's the straight cheat file, as Prulez said.

He was just cheating his ass off for a long time, that he missed this 'small detail' when posting his desktop.

Thing is, Given the fact the real cheat executable actually doesnt have an icon and would require additional files in the same folder as the executable (In this case, desktop), that would be false.

You also couldn't have copied game.exe and then changed the name, because the icon is different.

The thing that remains though is that you have a folder on your desktop named like that and with exactly that icon.

So.. what is it, according to you?

The Exif data supports that you used Photoshop CS to make the image, but I have to ask why you didn't just copy your regular Renegade shortcut and rename it. That would've been easier. And it were really a joke, why didn't you make it obvious (Ah-la Ethenal)? Not saying I'm convinced you cheat, but if that was supposed to be funny it wasn't very good. There's also the shortcut to your data folder, I'm not sure what kind of use the standard non-cheating Renegade player sees there...

I just opened the icon from the data folder and used that, I thought harder approach first I guess. As for the data folder, I use it a lot so I made a shorcut for it on the desktop and quick launch. I also like to just open RARs and Zipz and just drag and drop skins into the folder, not cheat. I don't see why people go so crazy and pop a boner every time something suspicious pops up.

What I did was take all the icons off my desktop and hide the taskbar. Then, I run ObjectDock (Although I hear RocketDock works fine too) and RainMeter (Which is the clock/system-usage/winamp control).

I installed rocketdock actually. the only thing i don't like about it is that it doesn't "stop" other windows. For example it might be always ontop, however the bottom of windows (like the status bar) goes directly to the bottom. I would rather have the vista sidebar effect where it "cuts off" that part of your screen so full sized windows dont go past it (like the standard windows toolbar)

Unfortunately, ObjectDock doesn't "stop" windows either. It's gotten sort of annoying, and I've had to start using autohide for the dock, something I normally didn't do for the taskbar.
