Quote:

Nopol's Normal Mapped Stuff V2.2

Contents of the RAR:

-HLSLnormal_map.fx
-normalmaps.mix
-shaders.sdb

Installation:

1. Backup the original HLSLnormal_map.fx and shaders.sdb in you Renegade\Data folder by renaming them.
2. Drag normalmaps.mix and shaders.sdb into the Renegade\Data folder.
3. (OPTIONAL STEP) If you wish to have diffuse shading on the objects that are normal mapped instead of just specular shading, copy HLSLnormal_map.fx into the Renegade\Data folder. Keep the backup in step one so that you can see the difference between the two. (NOTE: You need to have a graphics card that can support shader model 3.0 in order to use the modified HLSLnormal_map.fx)

Uninstallation:

1. Remove normalmaps.mix, shaders.sdb and HLSLnormal_map.fx and rename the backups to their original names.

Credits:

Normal maps made in GIMP
Diffuse shading code adapted from the book "Introduction to 3D Game Programming with DirectX 9.0C" by Frank D. Luna

Here are some sites you can download from:

FileFront <---Currently 2.1
MediaFire <---Newest, 2.2 with fixed Humm-Vee normal texture
steekR <---2.2

I'll try to get more links up with the new fixed version tomorrow. Both links above are new.

Screenshots:

Nod Vehicles with diffuse

GDI Vehicles 1 with diffuse

GDI Vehicles 2 with diffuse

Flying Vehicles with diffuse

Hmmmm.....
Toggle Spoiler
Its also happening at the Turrets and the AGT guns

Other vehicles seem to work good

PS. This is with the OPTIONAL STEP included. Have done everything as described in the
Readme

Yes my video card can handle shaders 3.0 even 4.0 if i had Vista (NVidia GeForce 9800 GTX+)

That's not a shader problem, it seems that Renegade can't find the normal map texture for those stuff. It started happening to me as well after I added some textures into the mix, I'll fix it ASAP.

The .mix was turned into a non-Renegade friendly format by Mix Editor; I've fixed it with RenegadeEx now. Currently uploading.

EDIT: Updated the MediaFire link with the fixed version. More coming soon.

I downloaded the updated mediafire and its putting black stuff on the vehicles and the turret seems to be missing something, it has that westwood thing. does this mean my computer doesn't support it?

I will, I was in a bit of a rush when I uploaded this.

EDIT: Ugh, there seems to be a missing texture with the Humm-Vee, will fix now.

EDIT 2: MediaFire link now contains 2.2, with fixed Humm-Vee normal map texture.

Is it just me or has this affected your weapons as well? (Both the shotgun and the sniper rifle seem more... shiny)

[View Forum Message](#) <> [Reply to Message](#)

Yeah, I added normal mapping for the Auto Rifle, Shotgun, Sniper Rifle, Grenade Launcher, Proxies and Repair Gun. I couldn't go any further because there seems to be some limit with the .sdb file.

Ok, so I extracted the files in the .mix to my data folder and I'm surprised to see that it works! The vehicles look very dark tho. Is there anyway to make them look a little brighter?

EDIT: The Mammy doesn't work :\

EDIT: The Mammy doesn't work :\

The mammy works for me, hmm. Try not extracting the stuff out of the mix or using the mammy normal map found in scripts 3.4.4. Also make sure you're using version 2.2.

You can change the darkness by using the original .fx file or editing the .fx file.
