So i have vehicle created and what note, i think i have everything boned correctly and it works good in leveledit..

But when i save it in leveledit and try it in renegade the vehicle dosent even show up

Am i doing something wrong?

....

Showing up in all black does not mean not showing up.

Check your collision settings and make sure your P bones are exported as -> export as bone.  
(see the w3d tab)

Also I see your P bons arent in the middle of your tires your should fix them up. (You will have to unlink the centerbones or they will mov with the P bones)

And it looks asif your cars front is way lower than the back of it. It looks to me you will have to rotate it a bit around the Y-ax.

Also how did you export the vehicle in Renx? You should make sure you did animation frame 1 right. (In there the vehicles suspension should look like it fell from a high place and landed)

And when you do export it look at animation frame one. (the slider should stand at 1 - 100)

Also make sure your worldbox collision and Chassis collision are set correctly. Your problem sounds asif the vehicle will appear in game but falls through the ground instantly. (not sure though)

Hope this helps.

That all sounds right,

When i do start up the map (its a map ive made) i ssee it far off in the distance and it kinda flashes a bit and then disapears.

The worldbox has physical and camera collsions and the v\_chassis only has projectial, is this right?

Try temping a cnc\_gdi\_humvee and change the model. Also make sure your map has physicalcollision. (Set your startup spawner next to your vehicle so you can see how it spawns make sure it isnt stuck in the map!)

Your worldbox does sound right and your chassis mesh is correctly set.

Put it in a pkg file, and see if it works from there, assuming of coruse, that you copied the objects.ddb file from the level edit mod package you used.

ok heres what i have in level edit (i have p bones centerd, and it is animated (exported as Hierarhial[Sp?]animated frames 0-100)) etc.

Toggle Spoiler

And now heres what it looks like in game:

Toggle Spoiler

Can i ask what am i doing wrong? (this is my first map ever and yes it is nascar map, and it is my first time working with level edit aswell)

If you try moving your vehicle through the terrain in leveleditor does the boundingbox become red? Or does it always stay white?

---

Yea, if it is above the terrain or just touching it it becomes white and if i put it through the terrain it becomes red

EDIT: Should i be pushing the wheels down? like it has a set spring suspension length, should i push them up a bit when i am placing it on terrain? (puting the car so low that the terrain is pushing wheels up)

ok here is what it looks like when i spawn the car:

toggle spoiler

See how it has a red box, and when i click on "position at cursor" it just moves it around the terrain without getting rid of red box

Here it is in RenX, Should it be underneath the X/Y axis grid line?:

Toggle Spoiler

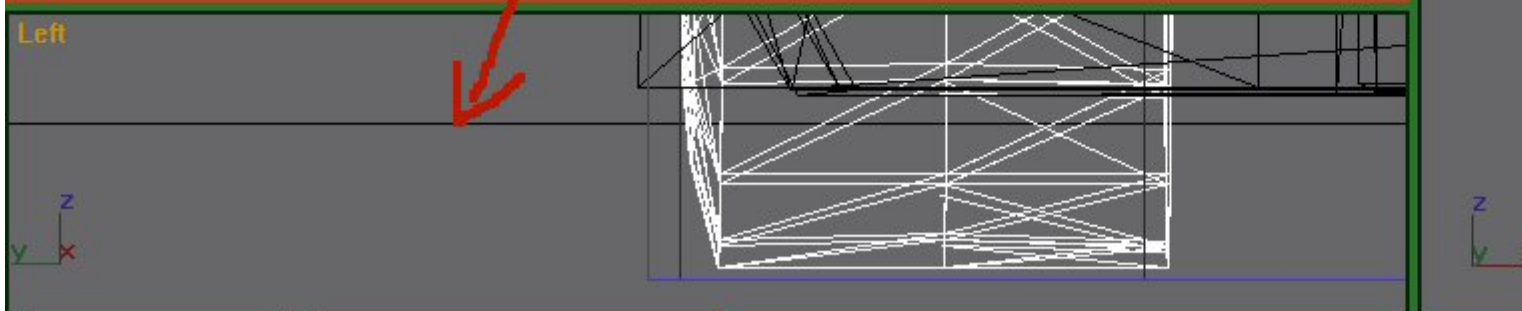

the only reason i do that is becaus the tutorial said to do it

Also watch out with the polygron amount in your models. I dont know how much this one has but if you are intending to have more nascars it might get a bit over polied.
