
Subject: Renegade = non responsive

I play renegade almost daily. Today when I connected to the server, suddenly I couldn't move or anything. I wiggled the mouse, pressed "F" to change view, nothing. Still sitting there peering in FPV at the purchase terminal. I restarted the game and eventually my entire computer - twice. No luck. I then decided to reinstall from scratch to see if that would solve the problem. However, after the long and painful process of reinstalling the whole of TFD I got naught but a black screen, although I can hear the sounds playing in the background so I know renegade is still working, but still unresponsive as pressing escape doesn't do anything, and I cannot hear the mouse rollover the menu options, etc.

What the heck could it be?

FYI

I connect using Ren IP

Run windows XP 32 bit.

Do not use renguard.

Exceed the min requirements.

Did you follow the sticky for reinstalling? The black screen is mostly cause by installing an old version of scripts over a newer version. Try reinstalling scripts 344 and check if that helps.

Thanks at least the black screen part is resolved.

Renegade works as far as the menu goes, I can navigate and start a 1 player LAN game etc. But again, when I get in game, nothing responds.

Resolving the black screen was reinstalling scripts 3.4.4, right?

Try reinstalling as per the guide in the sticky, something may have just become corrupted somehow. (Check for viruses)
