Guys, I've been wanting to learn more about pc, so I want to learn more about Pc hardware, you know the name of each type of connection and maybe cords and what they plug into? and like the different type of stuff motherboards have like how some have pci-e and some have agp (sorry if spelled wrong), pretty much, anything or much as it can explain pc parts, hardware and components, what name of the connections and cord's and idk speeds on the connection, idk anything

I found a great book on this! but is back to the windows 98 series even tho most still are based on today's hardware I wanted something updated

so do you guys know anything?

Take a computer apart, and try putting it back together.

PCI-E is faster than AGP, so more modern mobos would have it over AGP, which if I'm not mistaken, has been discontinued.

It's impossible to learn all at once, you learn it as you go(imo). If you really want to learn something try getting a job at a computer repair shop because asking on a forum is just pointless. I'm not saying everyone here knows nothing about computers, I'm just saying only a few if any would even be willing to spend hours trying to teach someone something.

Wikipedia would be a place to start, because it'll have information on everything you'd want to know.

<http://en.wikipedia.org/wiki/Motherboard>

Why not start from there, and as you go through, you'll get an idea of different slots, and ports. At the bottom, you'll see links for things like PCI-Express and BIOS, so you can follow those and learn more.

You can get this one, or try to find it at a library.

[http://www.amazon.com/CompTIA-Certification-All-Guide-Sixth/dp/0072263113/ref=pd\\_cp\\_b\\_0](http://www.amazon.com/CompTIA-Certification-All-Guide-Sixth/dp/0072263113/ref=pd_cp_b_0)

---

It's a textbook for A+ certification, so not only will it give you a lot of information (it's a huge book) but if you decide to go into a career in computers, it'll help you study for the exam.
