Ok I Found Out How To Make Neon Lights. But its Not That Good

Ok You Know Diehards Mines Well import them In renx and put them under you veh lol theres probably another way but this is the simpilist

is that a model?

That looks very awsome!

If that's an emitter you might try shortening the particle lifetime as well so that they don't look like a sparkler being swung around really fast, good job though.

It looks like shit, don't get full of yourself like Scrin and these other dumbasses pretending somebody gives two fucks about your terrible mod. Try producing something worth downloading before taunting others with it.

Set the particle lifetime to about 0.200 seconds and set the emision rate to a high number. Also it's better for the number of particles not to exceed 80. (it's written on the bottom of the screen)

I don't think you need to see take it that so hard, he is just trying to give a hint. Though, I have to admit it could have been in a more friendly way.

Who cares what others think. I like it, its better that (what i could imagine) the average Renegade emitter's 30th emitter make or w/e you call it. Keep up the good work

Make different colors. Or make the colors blend.

You could also make it pulsate by setting each particle to start transparent, then go opaque, then go back to being transparent. The shorter the lifetime of the particle would mean faster pulsating lights.
