Subject: Really low FPS?

I reinstalled ren from my TFD disk, then renguard, installed cp2 and the 344 scripts. Last night (after everything was installed) it worked fine. Now, I have a really low fps in game and even lower in the main menu.. Nothing has changed at all, what could be wrong?

I've reinstalled and noticed it was because of the scripts.. Is there any way to keep the things like the vehicle limit fix and the hotkeys (like home to bind vehs?)

Now it seems like renguard isn't even installed, but the window opens from game.exe >.<

Now I can't seem to completely uninstall it. When I try and start, renguard doesn't load renegade, I have to click run >.>

Disable the RenGuard sounds in the RenGuard options.
