[View Forum Message](#) <> [Reply to Message](#)

So, i probably asked this before somewhere, but why the h*** dont the blooms work on my 64bit renegade? ive tryed every version, scrip, even tryed a clean install with just the blooms, but Playas vehicle effect works, nothing else works.

are the blooms not working on the 64bit platform?

and yes, Shaders and everything in BHS.DLL is on

plz help

goliath35 wrote on Thu, 10 September 2009 16:59can u post a SS? i might know whats wrong

there, no bloom. I suspect lack of bloom support on x64 by BHS.dll

well have u downloaded scrins bloom n shaders and scripts 3.4.4?

if u didnt download 3.4.4 but downloaded the bloom then tats could be the problem

Subject: Re: The "Blooms"

[View Forum Message](#) <> [Reply to Message](#)

Can you show a screenshot of something that would actually show the bloom, like the lamps near the AGT on Under?

Anyway, try the installer: <http://4camp.net/scripts344.exe>

Check 'Bloom' and install. Forget the sample sceneshaders and stuff, you don't need them.

i deleted the 3.4.4 and reinstalled, now i get Scripts2.dll was not found. Are you sure you installed scripts.dll right? and then ren exit

i just ressurected it from the recyclebin thing, but i got another problem now, look at the dump file

Make sure all the .fx and .sdb files are in the data folder and that Shaders are checked on in BHS.DLL Options in the options menu within Renegade.

Bloom definitely works on my Vista 64bit Home Premium.

Renegade.

Bloom definitely works on my Vista 64bit Home Premium.

i heard it works for other people twho got 64bit too, but i dont work for me, i got

HLSLnormal_map.fx, PP_DownFilter8.fx, PP_BloomH.fx, PP_BloomV.fx,

PP_CombineUpscale8.fx, PP_BrightPass.fx, shaders.sdb, sceneshaders.sdb in my data folder
but also shaders.sdb and sceneshaders.sdb in my renegade folder

and just for the record, Players vehicle effect (the glowing one thing) works, just not the blooms...

:/ <http://renegadeskins.forumieren.de/custom-shaders-f94/vehicle-effect-t581.htm>

so it did in batman o.O it have its own bloom options (i think)xD and why wouldnt it support blooms? =(

anyways there was a game with Enabel Bloom option, i enabled and it worked there

(or my eyes messed up, is there any way to find out if it support blooms??)

default settings for Batman AA

so i guess it does aye?

cause first time you start the demo it scans for your graphic card

i just messaged nvidia asking them if it support bloom, i got this back
nVidiaYou card fully supports Bloom features in all games. Bloom is a software feature, not a hardware feature like HDR. All 3D accelerator should support it fine.

sooo...wtf? does it matter if i use TFD or do i need to install the old renegade CD with no text?
(text wont display lol)

Actually, to fix that, you need to restart your computer.

That still won't fix your problem. I dunno, I would just try reinstalling from scratch. Follow this:

using CP2 or anything renguard related on 64bit make renegade stop working, atleast in my end.
I've done the rest, i cant really say it worked out to well

Subject: Re: The "Blooms"

Posted by [CarrierII](#) on Thu, 17 Sep 2009 16:03:09 GMT

[View Forum Message](#) <> [Reply to Message](#)

CP2 can be installed independently of Renguard, and MUST be installed independently of Renguard on x64 systems due to the SVKP runtime-execution packing service which Renguard uses to protect itself from reverse engineering.

Check the other subforums for details on how to install CP2 without RG. It shouldn't be needed for bloom anyway.

Could you post the shader (fx) files, or a link to the source you got them from? I'm a shader programmer, and might be able to fix it. There were some changes to the dx shaders recently, with some new bugs, but there are workarounds.

Code seems fine. The problem is a bit perplexing, especially as they're using semantics hidden in the dll you referenced. I'll need to get a hold of the mod you've installed and run a few tests. Can you post a link to the shader expansion you used, and any mods required by it? (Preferably, the location where you obtained them online.)

<http://sourceforge.net/projects/rentools/files/scripts/scripts.dll%203.4.4/scripts344.zip/download>

The shader codes are found in the "shaders" project. Still, I doubt its to do with that since it works fine on other Vista x64 systems.
