Wierd... never seen that before.

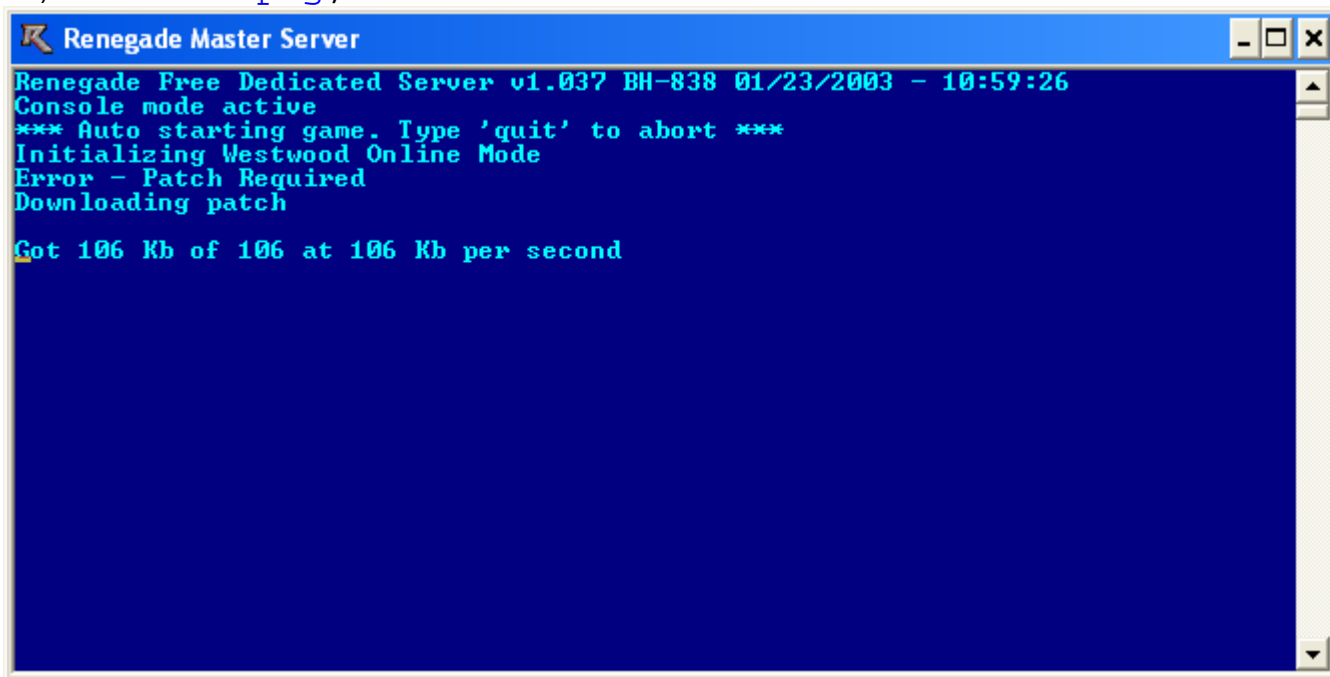

I have 2 computers sharing an internet connection.
I can play anygame online, and download/browse the internet on both simultaneously.
But renegade crashes if I try to connect to XWIS on my second connected computer.

Also if I try to host a renegade server on the second it acts funky and wont login.. then it spams me "cannot login." and then hangs and crashes.

anyone have any sort of idea what this is?

lolz I installed the RA2 shared internet components ... they overwrote Ren and the Server's.

Fixed. xD
