Now for the least downloaded skinpack ever

There are errors on the skins, such as overlapping logos, but I don't particularly care because this isn't going to be used by anybody, I'm betting.

The members chosen were based off of mostly postcount and also being active.

Anyway, here's what's included:

Goztow GDI Logo

Crimson NOD Logo

Cheesesoda Hummvee

R315r4z0r MRLS

BlueThen APC

SSnipe Medium Tank

CarrierII Mammoth Tank

danpaul88 Buggy

IronWarrior Artillery

RenX APC

jnz Flame Tank

ErroR Light Tank

Jerad Grey Stealth Tank

zeratul2400 crate

"I DESLIKE YOU" City Road Sign

Enjoy the fail.

I'm gonna laugh if anyone actually uses this.

Quality NOT included.

Toggle Spoiler

MODERATOR EDIT - "LeeumDee" fixed a small error (OK, a very large error) in the pack. THIS LINK is a better pack. For those of you who want the true "Quality NOT included" option, download the attachment below this. - CarrierII

GEORGE ZIMMER wrote on Thu, 08 October 2009 18:28I get most of these except RenX and jnz... there's dozens of better candidates for reneskins than them.

My choice method was, to be honest, kinda dumb. I looked at the users who posted the absolute most, then ignored the ones no longer active. So the first 11 active members with the highest postcount made it.

EDIT: Actually I haven't seen much of RenX recently... jnz was active pretty recently though...

Who knows, maybe I'll make another set with just people on the forums that are cool, regardless of postcount.

And IronWarrior: some people said the skins don't work for them (I am still using them and they're fine for me) so testing would be a good idea... uploading them won't be

They wont work as most of them have a blank alpha layer.

I fixed them all.

Here is one quick screenshot, just showing a few that are fixed up. But rest assured, they all work.

[Toggle Spoiler](#)

I've attached the fixed rar.

You left the old one too? Ahaha

BTW, Leeumdee, do you know how the error happened in the first place? I use Paint.net. Also,

maybe it had to do with packing in the RAR because the skins I used that worked were pt in before archived.

And thanks again for fixing the "large error"

I did think at the time you had used paint.net, I'm not fully clued up but I'm sure it has some issues with alpha layers. It's curious though that they worked fine for you (and as you say, before adding them to the RAR archive) However, I don't think archiving them would have created the alpha layer; I guess it's a mystery

And of course, you're welcome
