
Subject: FTP Uploader script

Posted by [Distrbd21](#) on Thu, 19 Nov 2009 01:09:44 GMT

[View Forum Message](#) <> [Reply to Message](#)

Could someone help me on making a uploader script to add into Yarr bot or for SSGM plug in?

i don't want someone to just give it to me i would like to learn how to make it.

i was looking at this code.

Link with Wininet.lib

where does this one go?

```
#include "Wininet.h"
```

where does this one go?

```
DWORD __stdcall Upload(void *)
{
    printf("Start upload...\n");
    HINTERNET intern = InternetOpen("YaRR", INTERNET_OPEN_TYPE_DIRECT, 0, 0, 0);
    if(!intern)
    {
        printf("Unable to open an internet - %d\n", GetLastError());
        return 0;
    }
    HINTERNET intern2 = InternetConnect(intern, "So my ftp host?", 21, "my username?]", "My
password?]", INTERNET_SERVICE_FTP, 0, 0);

    if(!intern2)
    {
        printf("Unable to open a connection - %d\n", GetLastError());
        InternetCloseHandle(intern);
        return 0;
    }

    if(FtpPutFile(intern2, "name of the html here?.html", "or here?.html",
FTP_TRANSFER_TYPE_BINARY, 0))
    {
        printf("Upload complete\n");
    }
    else
    {
        printf("Upload failed - %d\n", GetLastError());
    }

    InternetCloseHandle(intern);
    return 0;
}
```

where does this one go?

```
CreateThread(0, 0, Upload, 0, 0, 0); //start
```

Well SSGM Plugin don't like it, i tryed to make it a plug in and i get these errors.

```
1>.\FTPUUploader.cpp(33) : error C2065: 'HINTERNET' : undeclared identifier
1>.\FTPUUploader.cpp(33) : error C2146: syntax error : missing ';' before identifier 'intern'
1>.\FTPUUploader.cpp(33) : error C2065: 'intern' : undeclared identifier
1>.\FTPUUploader.cpp(33) : error C2065: 'INTERNET_OPEN_TYPE_DIRECT' : undeclared
identifier
1>.\FTPUUploader.cpp(33) : error C3861: 'InternetOpen': identifier not found
1>.\FTPUUploader.cpp(39) : error C2146: syntax error : missing ';' before identifier 'intern2'
1>.\FTPUUploader.cpp(39) : error C2065: 'intern2' : undeclared identifier
1>.\FTPUUploader.cpp(39) : error C2065: 'INTERNET_SERVICE FTP' : undeclared identifier
1>.\FTPUUploader.cpp(39) : error C3861: 'InternetConnect': identifier not found
1>.\FTPUUploader.cpp(44) : error C3861: 'InternetCloseHandle': identifier not found
1>.\FTPUUploader.cpp(48) : error C2065: 'FTP_TRANSFER_TYPE_BINARY' : undeclared
identifier
1>.\FTPUUploader.cpp(48) : error C3861: 'FtpPutFile': identifier not found
1>.\FTPUUploader.cpp(57) : error C3861: 'InternetCloseHandle': identifier not found
also what will this put on my website just that the server is online or will it put up the server info
like how many players scores k/ds?
but it idk what to do with it, and i can't see the website's of that other guys post.
```

[View Forum Message](#) <> [Reply to Message](#)

All you need to do to fix that is to put `#include "Wininet.h"` at the top (preferably) of the cpp file.
Then compile

Subject: Re: FTP Uploader script
Posted by [Distrbd21](#) on Thu, 19 Nov 2009 07:42:50 GMT
[View Forum Message](#) <> [Reply to Message](#)

now i get this, and me and zunnie can't figure it out cus when he compiled it it worked, than i was trying to add some .ini settings and now it don't work i tried to do it all over again but nothing.
here is the html out put.

zunnie says that i need the .h code for this but there is none, how would i go about making it?

The FTP uploader function is already in YaRR, and it already works. That code is what you already took out of YaRR!

Distrbd21 wrote on Thu, 19 November 2009 18:07Its in Yarr? where do i find that i've never seen a uploader in it.

That code you have is from YaRR, although it might not have been released. It's in YaRRPHP.cpp

Not sure of it was in YaRRPHP, but it was jnz that did it because afaik he originally make the FTP

function for me

reborn wrote on Fri, 20 November 2009 04:20What is it you actually want to accomplish?
i'm trying to make a SSGM plug in that will upload my server status to my website, witch will show what map it is on, is the server online, how many players,scores,k/ds,rank, etc

Edit:This way nobody has to relay on a bot doing it for them..

Hex wrote on Sat, 21 November 2009 12:24So you have done nothing but rip something from someone else's bot
it's not in the bot so no i didn't rip it from someone else bot.

but yes i took it from the link reborn said..

And even if its in Yarr i have the source to it so it rlly would be riping...

Reading between the lines here, it looks like Sladewill based his plugin for ftp uploading on jnz's code. The actual download for this plugin has gone missing, and now Distrbd21 is trying to recreate some of the functionality of that plugin using the quoted code in Sladewill's post.

[View Forum Message](#) <> [Reply to Message](#)

I don't think you've pissed anyone off. I think there was some miss-placed feelings towards you, but really, any feeling should of been directed at Sladewill (if there is to be any at all). Perhaps Sladewill should of mentioned jnz and where he got that code from out of respect, but really, none of this is your concern.
You're just here to try and get something working for your server, and I have a feeling that really you have no interest in annoying anyone...

Lone0001 wrote on Sat, 21 November 2009 16:20Here's version 1 of Sladewill's SSGM FTP Uploader plugin.

ty, what program was this made in?

And where do i put my ftp info in at? all i have is ftpuploader.dll, stylesheet, and the pics.

am i supost to have a .ini file to?

Subject: Re: FTP Uploader script
Posted by [Lone0001](#) on Sun, 22 Nov 2009 01:34:15 GMT
[View Forum Message](#) <> [Reply to Message](#)

You have to make a bat file called "ftpupload", put it in your Renegade FDS directory, and enter the following into it(filling in all the info needed):

```
@echo off
echo user enter ftp account username here> ftpcmd.dat
echo enter ftp account password here>> ftpcmd.dat
echo bin>> ftpcmd.dat
echo put enter path to html file here>> ftpcmd.dat
echo quit>> ftpcmd.dat
ftp -n -s:ftpcmd.dat enter ftp server here
del ftpcmd.dat
```

actually not, this is going to be automated so doing it by hand every time isnt very helpful, i will seriously look for my old one.

[View Forum Message](#) <> [Reply to Message](#)

I'll start you off, you have a FTP function

So

```

for (GenericSLNode* PlayerIter = PlayerList->HeadNode; (PlayerIter != NULL); PlayerIter =
PlayerIter->NodeNext)
{
    cPlayer *p = (cPlayer *)PlayerIter->NodeData;
    if (p->IsActive)
    {
        const char *Nick = WideCharToChar(p->PlayerName);
        printf("Nick %s Score %.0f Kills %d Deaths %d\n", Nick, p->Score.Get(), p->Kills.Get(),
p->Deaths.Get());
        delete[] Nick;
    }
}

```

This will allow you to pull almost all information of your players.

```

char Path[256];
GetCurrentDirectoryA(52, Path);
strcat(Path, "\\YourFile.txt");
void *f = (void *)fopen(Path, "w");

fprintf((FILE *)f, "%s\n",.....);

fclose((FILE *)f);

```

This will allow you to write to a file

\n = new line
 \t = tab

format control

Edit: so what you said in the code should go in the .h code right?

yes i want to learn it but if you don't tell me anything about it how am i supost to learn it? like where do i put it stuff like that, i do not have natural talent at scripting unlike most of you guys.

umm when i make that ftpupload.bat or w/e i get this, note my user name and pass will not be displayed.

No offense intended to you Distrbd21, but I do totally understand exactly where Hex is coming from.

Hex, I think you would enjoy helping more if you chose people to help more selectively, maybe?

Distrbd21, give me a few days, I'm busy right now. But I will help you out with this. In the mean time, try to stop being so helpless and be a little more grateful to those trying to help you. Your lack of insight into situations, and your apparant lack of ability to read tone on forums and your impatience has lost you the help of Hex. Perhaps in a year you might revisit this thread and see exactly how much Hex was trying to help you, and how your attitude lost you a possible contact for the future.

You may not realise it now, but Hex was really trying to help you.

'Don't bite the hand that feeds you' is a saying that springs to mind.

Reborn, this is why I don't normally post in this forum...

No offense intended to you Distrbd21, but I do totally understand exactly where Hex is coming from.

Hex, I think you would enjoy helping more if you chose people to help more selectively, maybe?

Distrbd21, give me a few days, I'm busy right now. But I will help you out with this. In the mean time, try to stop being so helpless and be a little more grateful to those trying to help you. Your lack of insight into situations, and your apparant lack of ability to read tone on forums and your impatience has lost you the help of Hex. Perhaps in a year you might revisit this thread and see exactly how much Hex was trying to help you, and how your attitude lost you a possible contact for the future.

You may not realise it now, but Hex was really trying to help you.

'Don't bite the hand that feeds you' is a saying that springs to mind.

see i told you i'm not good at talking to people i always some how piss them off.

FYI, I have made the foundations of a FTP plugin for you tonight. I'm trying to make it as configurable as possible.

It's coming along quite well. Take a look at the ini file so far...

My aim was to allow you to create your own simple page from within the ini file itself. The page is never going to amazing or jaw dropping, but it will certainly provide the information relevant to the game going on in the server, and it will allow you to customise it fairly well too.

; This plugin is a remake of Sladewill's FTP uploader plugin because he lost his version.

; The actual upload function of this plugin has been adapted from jnz's upload function. He's still the man!

; This plugin, while a remake, is probably a little more interactive, letting you choose options rather than hard coded values.

[General]

; This is the hostname of where you want to upload the file to. It could be an IP address like '208.43.29.154',
; or it could be an ftp address like 'ftp.mysite.com'.
FTPHostName=

; This is the user name for the FTP account you will be using
FTPUserName=

; This is the password for the supplied FTP account
FTPPassword=

; This is the port you will be using, normally '21'.
FTPPort=

; This is the name of the file you want to upload there. can call it whatever you want, but I am assuming the file extension would be .html.
Filename=serverstats.html

; This setting defines how long between updates. It already updates at each map load, and also when a player join/leaves. Four minutes seems fine to me.
TimeInSecondsBetweenUpdates=240

; This is what you wish to call the title of your web page that you will be uploading. Think
<Title></Title>
Title=MP-Gaming Status Page

; This is the background color you want the page, think <body bgcolor=
Bgcolor=white

; This is the color you want the text to be.
Text=blue

; This is the header of your page
Header=Status page for my Kick-ass Server!

; This is where you can write some text to customize your page. Tags will actually work here, so you can put images in here too.
UserText=<center>Welcome to the status page for my server, it may look like a simple page, but it contains a wealth of information about what's going on in the server right now!</center>

; This allows you to wrap the status information in a tag, or bunch of tags, or whatever...
; You could for example just <center> it all, or place it in a frame.
; Or you could place a picture in front of it. I am not much of a web designer, but basically, this part here allows you to freely type code here
; and it will be placed just before the status stuff
StartFormat1=<center>

; This allows you to add all the ending tags. You would close them all off here </center> for example. It will allow you to freely type code.

EndFormat1=</center>

; This setting allows you to toggle on/off whether or not you display the time of the last page update.

DisplayLastUpdateTime=true

; This setting allows you to toggle on/off whether or not the map being played is put on the page.

DisplayCurrentMap=true

; This setting allows you to toggle on/off whether or not the player counts are shown on the page.

DisplayCurrentCounts=true

; This setting toggles on/off whether you show the scores ingame for GDI and Nod.

DisplayScores=true

; This setting if enabled shows a detailed break down of players in the server (kills, score, death etc etc).

DisplayIndividualDetails=true

; This setting allows you to wrap the 'DisplayIndividualDetails' in formatting tags. It looks a bit shitty just as a list, so you can place it in a frame or whatever here.

; You could also precede it with an img or whatever... Clearly, the startformat2 setting is for the opening tags, and the endformat2 is for the closing tags.

StartFormat2=

EndFormat2=

; This is also where you can add some text, it goes after all the status stuff on the page. This will also allow you to add tags to the text too!

The first version is ready...

I made use of jnz's upload function, and also though it would be a waste to see Hex's code go unused, so implemented that, too.

<http://spencerelliott.co.uk/downloads.html>

Let me know if there are any bugs.

Edit works gr8 one thing tho.

I get a null at the top and bottom of the page.

Here
<http://dabomb.dsgaming.us/serverstatus.html>

The header i tried taking off and it does that null thing, and idk what the bottom is about.

Awesome to see it actually in use. I like it!

Any 'null' values are because you've left a blank entry in the ini file somewhere.
