Have you made sure there is actually a scripts2.dll in your Renegade folder? You most likely overwrote the scripts.dll(you're supposed to -rename- this to scripts2.dll) instead of renaming it.

well shit... never had to in the past... but whatever ill do something about it...
edit: got it its all good

The precedent is not to be nice to cheaters on this forum, due to the game's near 8 year struggle with them. Goz also indirectly raises a neat point, by not solving your problem, we keep a known cheater offline.

Try search, BTW.

that is perfectly understandable but at least keep it in a
controlled topic... and stop throwing mine off topic

Try search, BTW.

That and it could be a cheat that's causing this problem, in that case we couldn't help anyways, we aren't cheaters.

I presumed he was being sarcastic, not least as I cannot see how normal bighead cheats could cause the error...
