I remember a screen in the Renegade setup menus where you could select between skins for the Renegade models. I originally thought this was a bizzare dream, but it does exist on a vanilla install without official patches.

When I first played Renegade I wasn't online (No Internet) and so I didn't have access to the patches. The best multiplayer experience I had was in Multiplayer Practice. I even wanted to file a bug report because Under was the only map with bots . The extras cheats was along the lines of extras fnkwrrm.

Did it actually work, and what was it like? I remember a preview of the model on the right and a list on the left, nothing more.
