If you ran The Scripts 3.4.4 installer as suggested earlier, then run it again and DO NOT check "BLOOM" or "SHADERS".

Might be old hardware failing with bloom and shaders...

why does it work from link but not command line, arguments?

all of the exes work when i make shortcut with arguments is when it goes wrong....

The scripts EXE or Renegade?

If it's Renegade, make sure the "start in" and working directories are correct...

```
-multi +/-connect *.*.*:**** -netplayername "name"
```

i replaced ip and port as i dont not wish to share it.

This works fine on vista.

hmm afaik it should be

```
/multi +connect *.*.*:**** -netplayername "name"
```

screen turning off is a resolution issue, try changing it to something else.

try running the game without any added command stuff, and see if it works. Then you might find the issue

I use it all the time, without command-line, also if i hibernate my pc, and come back it shows fine, but disconnects the network.
