Can i use a newer version of directx sdk and still compile scripts.dll. You dont need DirectX SDK to compile scripts.dll only if you also want to compile shaders.dll

And you can use a newer version. I use March 2009 atm if i recall correctly

I tried a newer version of the DirectX SDK (August 2009) and it's missing 2 files (d3d9caps.h and d3dx9.h if I recall correctly) from the August 2006 version, simply getting the two files from someone who has the August 2006 does not work (for some reason it can't find one of them ).

yea i got this error

shaders.cpp(37) : fatal error C1189: #error : The Renegade shaders.dll requires the DirectX August 2006 SDK installed in order to produce a proper executable. If you wish to use a different version of the SDK, modify the delay load dll in linker settings to point to the newer d3dx.dll

You indeed have to update the linker to the new library (if it didnt by itself which it did for me )

Toggle Spoiler

Also you'll have to modify a the import line 'd3d8\_caps.h' in engine\_d3d.h to 'd3d9\_caps.h'  
It will look like this after that;

Toggle Spoiler

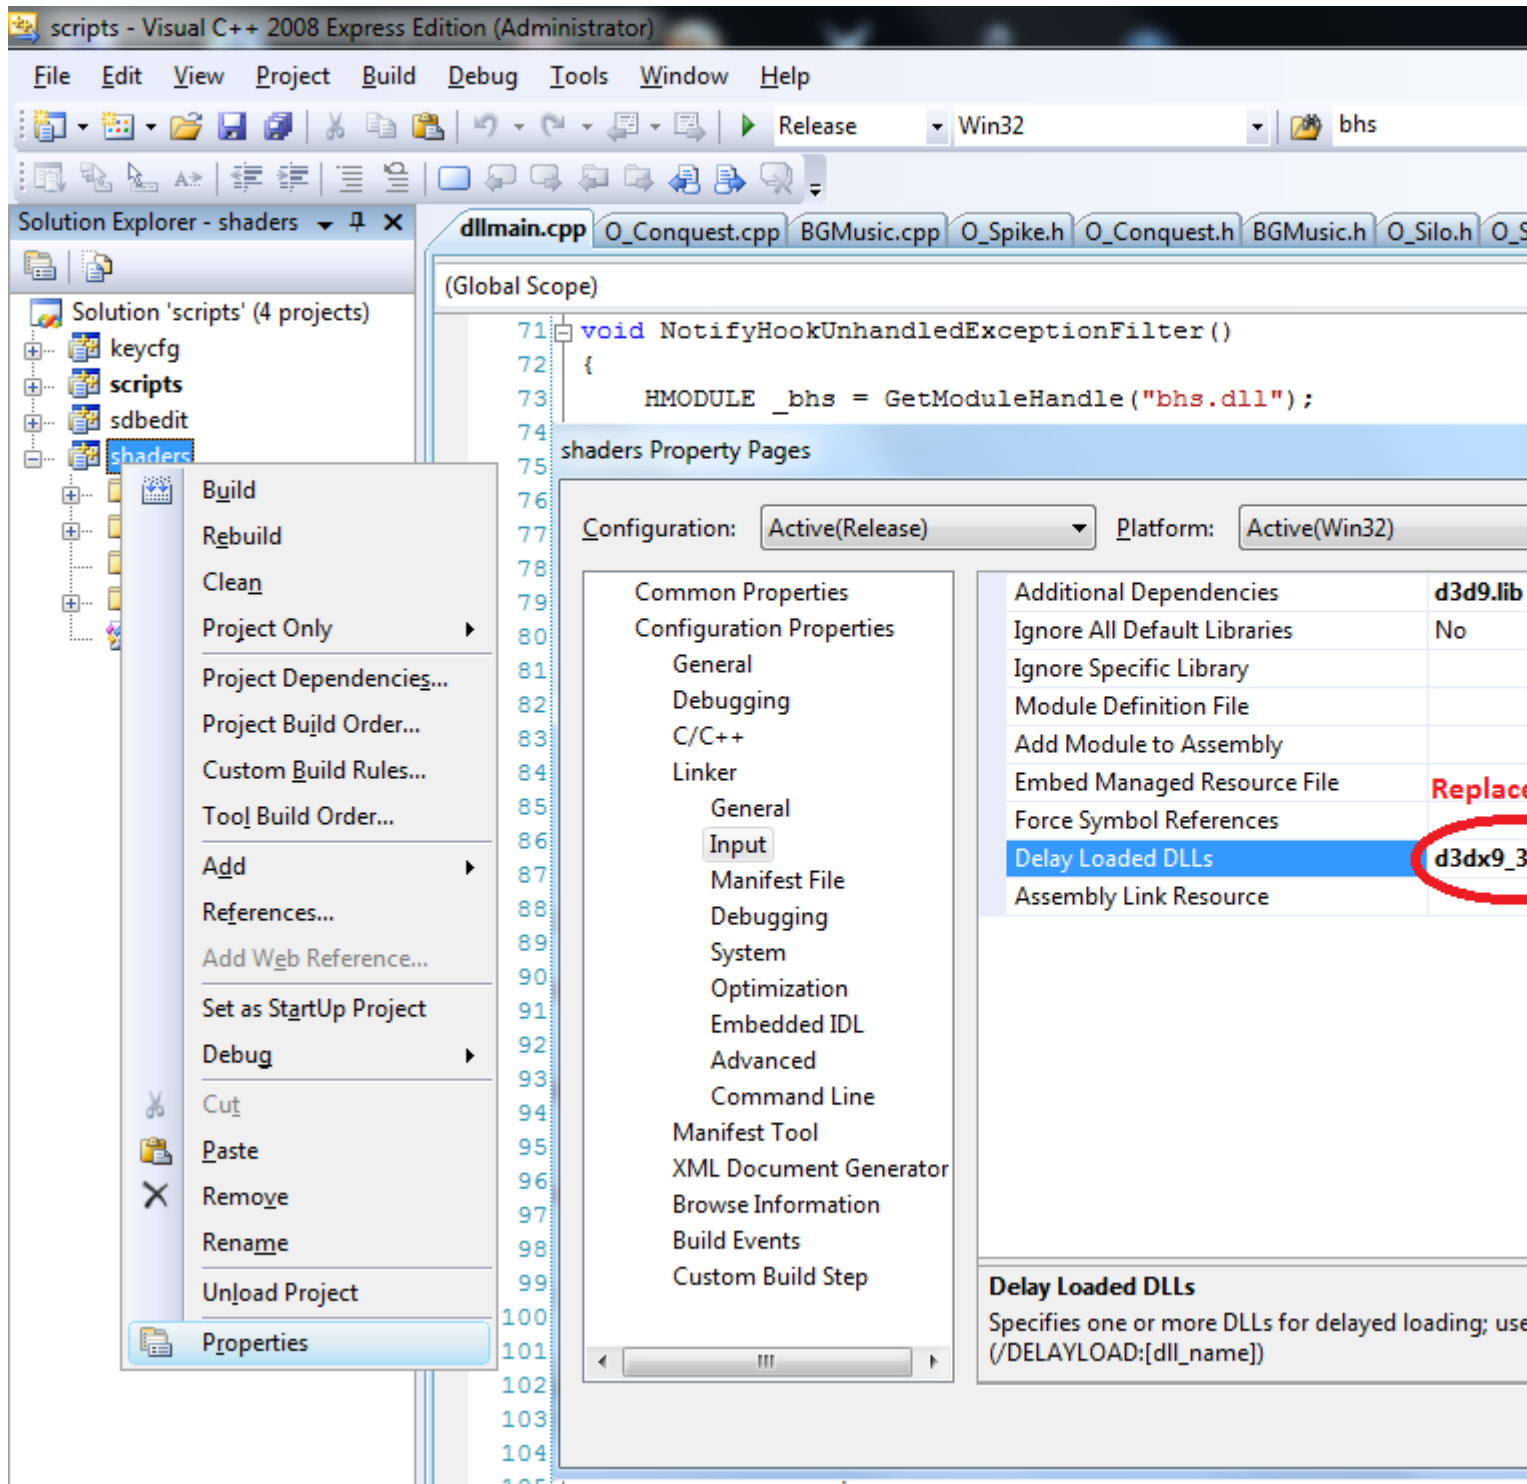

I believe that was all but if you encounter another problem just post it here and ill take a look at it again ^^

EDIT: Oh i forgot to tell this;  
In shaders.cpp change the line  
#if D3DX\_SDK\_VERSION != 30  
to  
#if D3DX\_SDK\_VERSION != 41  
Toggle Spoiler

I got two new errors when i changed 'd3d8\_caps.h' in engine\_d3d.h to 'd3d9\_caps.h'

My linker looks exactly like yours and it still says it needs dx 2006.

engine\_3dre.h(267) : error C2146: syntax error : missing ';' before identifier 'Caps'

engine\_3dre.h(267) : error C4430: missing type specifier - int assumed. Note: C++ does not support default-int

shaders.cpp(37) : fatal error C1189: #error : The Renegade shaders.dll requires the DirectX August 2006 SDK installed in order to produce a proper executable. If you wish to use a different version of the SDK, modify the delay load dll in linker settings to point to the newer d3dx.dll

I think it might because i did i system restore after installing 2006 and the files are still there so the lib and include files are still being added.

You either didnt change the line in shaders.cpp

```
#if D3DX_SDK_VERSION != 30
```

to

```
#if D3DX_SDK_VERSION != 41
```

Toggle Spoiler

Or because of you system restore you lost the newer version or w/e

That only would explain one error (the one with the fancy text). The other two are caused because you changed #include "d3d8\_caps.h" to #include "d3d9\_caps.h". Newer versions of the DirectX

SDK don't really include D3D8 header files anymore, so you'll need to find that header (and all dependencies) on the intertubes and toss it in your shaders folder.

Well i dont really know which files it where. I only got this far with my memory + looking through source.

And if you say there are more places then its certainly true but i dont know them right now
