What are the most common renegade game resolutions?

I will be making bloodHUD for the following resolutions:

2048x1536

1920x1200  
1920x1080

1600x1200  
1680x1050 <<< added  
1440x900 <<< added

1280x1024  
1280x960  
1280x768  
1280x720

1024x768

If i have forgotten a decent screen resolution, please report it here!  
I won't make it for 800x600 or below.

You know, you can use negative values to get stuff on the bottom/right side of the screen instead of using large positive values. I believe so at least.

yes i know, but in this case it isn't going to be working correct that way.

I already use negative values for my RSF hud. But the BloodHUD is an addition to the RSF hud.

And the blood that will be shown on the screen will be on 1 texture.

So basically, each resolution will get its own texture. I already programmed it like that.

Hardcoding it for each resolution is plain dumb.

Yeah, As I recall the hud that DeathLink made was coded so that it worked for pretty much every res, it'd be best doing that.

1280x1024 is most common anyways.

Please don't talk about how i coded it, because you may have no idea of how it will look like.

Ty everyone, for reporting your resolution.  
And why are people reporting their res while its already in the list lol

ps. - The RSF hud is coded for every resolution.  
only the Bloodhud overlay (add-on) cannot be made for every resolution, because the texture will be covered on the entire screen.

only the Bloodhud overlay (add-on) cannot be made for every resolution, because the texture will be covered on the entire screen.

That's also why I said that '1280x1024' is most common, no point in making it for 800x600

Well i made this, it will have 3 health levels, so 3 textures per resolution. Well it can use some improvements.

all you need to set different xy pos for each resolution. Its pain but its not very hard and it takes like 10 mins.

Why not post it?

Or would it break shader.dll licence if you don't release w/o source, well the least you could do is post ss

I said offsets, not textures. You can just use one large texture for it all.

Sir Kane wrote on Sun, 24 January 2010 06:29I said offsets, not textures. You can just use one large texture for it all.

Oh oke, but that will be a pain in the ass to code Lol.  
And a big part of the texture will not be visible on HD screens.

It would look virtually the same with all resolutions if done correctly.

I already finished this feature for the complete HUD. It will have 2 different textures.

1 for Normal screen ratio's  
1 for HD screens

The texture is automatically reshaped to the screen resolution.

Conclulsion: It will work for every resolution!

---
