i started today to try create a plugin for ssgm

I downloaded the example plugin loaded in Visual studio prof 2008  
Convert the .sln to 2008 version

Say build Project and put the example.ini & Plugin.dll in my FDS Server.

ssgm.ini put 01=Plugin under Plugin section.

Start FDS it's start try loading map And it Crash my FDS and restart it ?

Why i just want to test the source code before i do antying lol

recompile ssgm some plugins don't seem to work unless you recompile ssgm.

ssgm.ini put "01=pluginname" without .dll

hmm oke i will give it a try i wounder if it works because its the example plugin out the same rar file

Edit:

Oke i have try Rebuild SSGM more found some errors now im thinking can it rebuild in VS 2008 ? because it gives error not supported anymore

I downloaded one of the plugins from reborn and rebuild it with VS 2008 that works fine
