I installed earlier few times Renegade, on Vista and Win 7- there was no problem at all. But now, after I had to reinstall Win 7, during installation process when it shows in which folder in StartMenu should be the shortcuts placed, it shows no existing folders in StartMenu (of course there are many there on my computer), only new folder named Westwood. But when I click "next" after the "Westwood" folder is chosen it shows only an issue message- sth about no such folder exists or could not install to this folder (I don't remember exactly) and that syntax is incorrect! I must write it here, that I have tried to install it some different ways- which means with admin privileges, without these, from different setup files (on Renegade CD there are about three files from which the game installation could be done).

B.t.w. the similar issue I had recently while I tried to install WarCraft 3 from ISO file. And again there were no problems with installing WarCraft 3 earlier onto Vista and also onto Win 7.
