I'm still testing a few CD's but would like to know if anyone knows what is wrong. If the .ISO Files i am using are messing it up i would like to know, and they are LEGAL they were released for CC Red Alert and CC Dawn. it is reading the CD but not activating the start up file(Autorun/Automenu) I'm just curios why this happens. It has happened with every comp I've ever had within the first 2 years.

Put your PC \ Drive in the microwave for 30 seconds that usually fixes all problems PC related.

 i could agree
but seriously has this not happened to anyone else?

Auto booting of a CD is an option in windows which can be turned on and off.

Also ive never seen ISO's autorun on my PC i believe. Im not really sure because i always set autorun off in windows

And if it reads the CD/ISO without problem, what's the problem??
You could just double-click it yourself...

you need a program like poweriso or magiciso to use an iso you can't just double click it.

The problem is im a lazy bastard

and it was the autorun turned off... damn kids keep messing with it And the ISO's do run automatically with Daemon

Autorun is probably turned off..

My computer > Right click on CD drive > Properties > Autoplay > select what you want it to do with the given inserted media.
