If the server default is "driver is gunner=yes" and you press q, the second person to enter your vehicle will control the gun once you press q it will allow them to fire the gun. To revoke this option simply press q again.. Thanks!

You just have to delete the controls file.. controls.cfg if I remember correctly.. then at the next start Ren will rewrite this file and put in the correct line for the Q key. You'll then have to remap your keys (if you need to) and save (if you want to), but just don't load an old command config from the Load in CONTROLS.-Shep
