Got a slight problem with the flashing lights tutorial (here)

The light doesn't flash, and you have to be a certain distance away from it before it becomes visable. Any ideas when I am doing wrong?

Upload your scene. It's hard to tell what's wrong from our point of view.

This works for me:

Pass1

Texture

stage 0 texture

lightflash.tga or red_spot2.tga

Vertex Material

stage 0 mapping

Type: Linear Offset

Args: UPerSec=-.5

UScale=.001

Shader

Blend mode: Add

Advanced

Detail Color: Scale

This was meant as a follow up for the flashing light tutorial, showing how to do a multi layered flashing light.

The tutorial was never written, but it follows the same principles as the basic tutorial.

The rar contains the w3d, gmax and all sample textures.
