Okay. So i have a lot of issues doing the quick play. it won't start. And then the advanced one i can't never join ANYONE elses area so i make my own....and then once i get there it says "GAMEPLAY PENDING" and it never goes away! and while it's doing that i cannot move, or shoot or anything!

I have dial up internet, could this be the cause of my problem?

please reply!
Thanks

Quick play no longer works. Via advanced game listing you get the list of servers. If you join big servers, you'll just disconnect because your dial connection is too slow to handle the information you're getting. Try joining in a server with 10 players max.

Putting up your own server will not attract any player, you're better off trying to join an existing one.

Not helpful, Kimb, because he's using stock renegade.

What error message do you get when you try to join a server?

Well the thing about that is, I don't exactly get an error message.
It goes like this: I click on a server I want to join, and then the "Join game" button isn't lit anymore.
I click the "join game" button and nothing happens. This happens with all the servers. and i can't tell how many people are in one at a time it's a little confusing.

Oh! that attachment makes it so much easier to explain!
So, you see where the circles are different colors?
Mine are all red, every single one.
And you see how the number of players is like...in the teens?
mine are like in the millions....How am I supposed to join then?

Since it's impossible for a Renegade server to have more than 127 players something must be wrong with your installation of the Westwood Online Components. Try re-running the installer but only ticking the box for the WOL components when it asks which items to install.
