"your version of westwood online is incompatible with this product. Please reinstall your westood online."

lol dont know if people are still playing i miss this game and want to try it out agian.
I followed the sticky carefully `reinstalling renegade in 9 easy steps
I have windows vista and everything I installed including the corepatch 2, updater 3.4.4 and script I ran as administrator mode. I`ve tried game, game2 and renegade and get the same message. I dont have directx9 or know if I need it yet. and I didnt install patch 1.037 because I have The frst decade. and instructions said I didnt need it.

Whats your suggestions.

Gamename: Sn1p1ng4u

Alright think I figured that problem out. I needed to install the Wolapi from the APathBeyond client
http://www.game-maps.net/downloads/apb/fds/APathBeyond9935FDS.exe
Someone should probably add that into the 9 easy step instructions.
Im further but not there yet.
Cant seem to log in. doesnt give me an option anywhere. when i click advanced game listings "Operation timed out"
How do I get t log inscreen alos. "my information" "Manage account" isnt giving me any available options.

To prevent further spam.....

Download WOLAPB

copy only the wol components
paste em on in the ren folder NOT DATA
Boot up ren and your done.

On the menu where it gives Westwood online or gamespy, on your left theres a little sidebar, highlight it and click on my information

Sorry about the spam its normally not my nature and I dont know how it happened. Had web sending issues "resend" maybe thats how.
I already know all about the My info and manage accounts. also its in my "Internet" folder not data. Should it be in my regular folder the Wolapi file?
I just cant get to the account and password login screen.
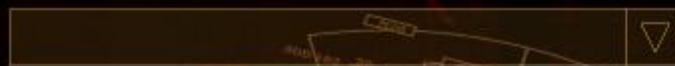

Thanx for help glad to see ppl still play this.

[Edit] Sorry I have WolapI 1.20 Is that what you meant by WolapB
if these are 2 different things I was not able to google search WOLAPB which u mentioned in ur last reply. I also moved WOLAPI form the internet folder the the renegade directory and no change happens when i reload renegae. I still cant bring up the login screen.

u do realise if u insert your renegade disk and only select wolapi rather than installing renegade it will fix this error.

I have the first Decade I havent seen this option while installing it. thats why i had to go through so many steps. like downloading ApathBeyond to get the WOLAPI file.

Perhaps XWIS is down at the moment.

But to access the my info
CLICKHERE

Phase I know how to log into an account or to unclick auto login and such. I played renegade alot 4-5 years ago. I was a moderator in Black-Brigade and loved on the old Blackhand servers. But I dont know much about Xwis. what it is or how it works. I always bypassed it or never had problems back than. When i go to My info it auto forwards me to serverlists some reason i cancel than im in my information.
Perona

everything but internet connectivity option are disabled. see my 3 pictures I uploaded it shows connectivity brighter than the other 4 options.
It doesnt want to load the account/password pop-up. when I hit Manage account i get this "fail to load page" error.

So I think maybe i need somethign to do with Xwis.

XWIS is what we now use to connect on rene multiplayer
But right now its down due to physical server move so it may be teh issue your having right now

Before we had WOL but when EA took over in 2003 it was defunct and replaced with XWIS

Ah I c
Maybe its been that long since I played. actually yeah makes more sense i woulda been in grade 9 or 10 back than. But I have played atleast once with thefirstdecade in the ast 2 years. Yeah possible because xwis is down for server move but would that effect me getting to my login screen? wierd.

We are not sure if it affects the login but the last time XWIS was down, the logins wasn't effected.

So we might just have to be patient

Ironically, my browser screwed up whilst removing the duplicate topics.

A big thank you to the forum members for not flooding all of the topics with posts.
