FDSComm Public Beta v0.4

TCP Logging and Commanding system for the Renegade FDS.

Hey guys!

I've had this as an internal beta between me and my friends for a while now (bout 7 months) fully working.

It is a plugin for SSGM that allows you to connect to the Renegade FDS and Send TCP commands while also allowing you to receive TCP Logs from the FDS.
I compiled a thorough guide and 2 socket bot like examples. Source is closed for now, sorry.

<http://www.halo2pac.co.nr/fdscomm/guide.htm>

Edit: This will need Hooks.dll

I'll give this a try.
Thanks

You do realise SSGM 4.0 already includes this don't you? Or at least the logging part anyway...

After your post I did, but I've had this as an internal beta for 9 months now completely working without changes. I just wanted to finish my line of products that would go with it... But since you are giving a similar version with 4.0, I might as well just release it.

I believe though, mine has a few more features.

And you do realise this is available and SSGM 4.0 isn't yet ()

I didn't have the attention span to look up the actual dates at the moment but I knew it was over 6-9.

Guide.htm

Whats's new? {11-5-09}

- Serial Hook added.

Whats's new? {10-19-09}

- Speed improvement!
- Few minor bugs fixed.
- Removed buffer overload

Whats's new? {7-19-09}

- Massive speed improvement!
- New commands

What's New? {3-4-09}

Speed Improvement

Plugin reformatted to work properly with SSGM. This may limit functions during map load, but during gameplay it will work properly.

and by "speed Improvement" I learned better threading techniques, so it sped it up a few hundred percent from the first beta.
